Orogenic Processes in the Alpine Collision Zone Nikolaus Froitzheim, Stefan M. Schmid, 2009-12-08 This book covers a multitude of Alpine type working areas and processes active in collisional mountain building in the form of 16 selected very up to date review and research articles covering the Alps Carpathians and Dinarides These data were presented at the 8th workshop on Alpine Geological Studies in Davos held in October 2007 The compilations and new data are of interest to earth scientists interested in mountain building in general and those interested in processes of continental collision in particular The book is virtually indispensable for advanced students and scientists involved in Alpine studies

Encyclopedia of Geology, 2020-12-16 Encyclopedia of Geology Second Edition presents in six volumes state of the art reviews on the various aspects of geologic research all of which have moved on considerably since the writing of the first edition New areas of discussion include extinctions origins of life plate tectonics and its influence on faunal provinces new types of mineral and hydrocarbon deposits new methods of dating rocks and geological processes Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non geology professionals seeking up to date reviews of geologic research Provides a comprehensive and accessible one stop shop for information on the subject of geology explaining methodologies and technical jargon used in the field Highlights connections between geology and other physical and biological sciences tackling research problems that span multiple fields Fills a critical gap of information in a field that has seen significant progress in past years Presents an ideal reference for a wide range of scientists in earth and environmental areas of study
