Transportation In Cities:

Transportation for Cities Wilfred Owen, 1976 U S transportation policy long dedicated to promoting intercity transportation has been broadened in recent years to accommodate the needs of metropolitan areas Both urban highways and public transit have been receiving heavy emphasis and many miles of new subways are being built with federal aid during a nationwide resurgence of interest rail rapid transit While applauding the new directions in policy the author of this study stresses the need for more innovative applications of federal aid to cope with the closely related problems of transportation energy and the environment Decaying cities and sprawling suburbs he contends force a wasteful use of transportation mainly the automobile for escape from a worsening environment and as a means of bridging the increasing distance between the workplace housing shopping centers and other elements of urban life Thus mobility in the metropolis depends as much on a reordering of the environment as it does on improved transportation systems The design of these systems requires a careful consideration of priorities and alternatives the author cautions in order to avoid perpetuating obsolete methods at enormous cost His analysis of present policy and possible alternatives suggests that the time has come to link energy conservation and urban renewal programs with a program that combines federal aid and the the revision of transport management

Transportation in Cities Eldor Olin Pederson, 1980 **Transportation for Livable Cities** Vukan Vuchic, 2017-09-08 The twenty first century finds civilization heavily based in cities that have grown into large metropolitan areas Many of these focal points of human activity face problems of economic inefficiency environmental deterioration and an unsatisfactory quality of life problems that go far in determining whether a city is livable A large share of these problems stems from the inefficiencies and other impacts of urban transportation systems The era of projects aimed at maximizing vehicular travel is being replaced by the broader goal of achieving livable cities economically efficient socially sound and environmentally friendly This book explores the complex relationship between transportation and the character of cities and metropolitan regions Vukan Vuchic applies his experience in urban transportation systems and policies to present a systematic review of transportation modes and their characteristics Transportation for Livable Cities dispels the myths and emotional advocacies for or against freeways rail transit bicycles and other modes of transportation The author discusses the consequences of excessive automobile dependence and shows that the most livable cities worldwide have intermodal systems that balance highway and public transit modes while providing for pedestrians bicyclists and paratransit Vuchic defines the policies necessary for achieving livable cities the effective implementation of integrated intermodal transportation systems

Autos, Transit, and Cities John Robert Meyer, José A. Gómez-Ibáñez, 1981 **Transportation and the Urban Environment** U.S./U.S.S.R. Urban Transportation Team, 1981 Cities and Mobility & Transportation Pascual Berrone, Joan Enric Ricart Costa, Ana Duch T-Figueras, 2016-07-13 Mobility is a key dimension of cities As urbanization accelerates the demand for mobility and transportation escalates This booming demand stresses the existing urban transportation systems

and infrastructures intensifies widespread congestion and traffic gridlock increases road accidents and augments CO2 emissions and air and noise pollution which is starting to cause serious health concerns How will our current transport systems cope with this rising demand for mobility in cities How can city planners and mayors around the world come up with strategies and solutions that enhance sustainable and integrated urban transportation systems What is the future of urban mobility This volume is part of a book series called IESE Cities in Motion International urban best practices Cities and Mobility Transportation focuses on how to address the mobility challenge in cities It aims to be an insightful analysis of the main urban mobility and transportation trends and challenges a collection of international best practices on sustainable urban mobility an instrument to help city managers and policymakers solve the urban mobility challenge and improve accessibility in cities for the benefit of all

Transportation and the New Cities Northwestern University (Evanston, Ill.). Transportation Center, 1965

Future Transport in Cities Brian Richards, Richards shows that attractive and practical alternatives to a car dependent society are possible With the growth of car ownership and use reaching crisis proportions in our cities it is imperative to find and implement alternatives if cities are to survive and prosper He reveals how transport technology is developing in particular showing how it can be integrated into the urban environment The book opens with a look at the best of current transportation systems and goes on to explore such advanced technologies as automated highways covered cities monorails new elevated systems smart cars guided buses as well as intelligent highways and car free housing The importance too of simple measures such as walking and cycling are covered as being an essential part of any future city as well as that of an integrated transport if people are to be encouraged to get out of their cars
