economic activity with the busts in world output gap corresponding to unobserved systemic risk associated with major  
financial events In addition systemic risk shocks are shown to be important drivers of output gaps while country risk  
premium shocks can have important effects on the trade balance Commodity prices in particular the price of oil are shown to  
be demand driven The model performs well at one and four quarter horizons compared to a survey of analysts forecasts In  
addition systemic risk shocks explain a large share of the forecast variance for the world output gap country output gaps the
