An Elementary Manual of Statistics Arthur L. Bowley,2013-11 An excerpt from the Author s Preface This manual is intended for the use of those who desire some knowledge of statistical methods and statistical results without going deeply into technicalities or undertaking mathematical analysis it is hoped that it will be of service to all who have occasion to use statistics in their own business or profession or who take an intelligent interest in public affairs It is also designed as a first course in statistics for students who wish to proceed further in the subject and if it serves its purpose will stimulate interest in the many fascinating problems that await solution and that can only be attacked by the methods of modern mathematical statistics The first part deals with elementary methods and with such technical terms and ideas as are indispensable in the handling of numbers on a large scale In the second part the origin of many groups of public statistics is shown their adequacy is criticized and some of the more interesting results which are based on them are briefly summarized

This part is intended as a guide to official statistics not as a compendium or dictionary of them and the problems attacked are given rather as illustrations than as substantial contributions to knowledge To facilitate the use of the book in the hands of teachers a number of exercises of various degrees of complexity are given in Appendix I Every serious student of commercial or public affairs should be acquainted with the nature of the contents of the Statistical Abstract of the United Kingdom to promote this knowledge and because many pages of headlines and figures would otherwise have been necessary a large proportion of the examples relate to tables in the Abstract for 1909 for which future or earlier abstracts can readily be substituted Appendix II contains a short list of Blue Books which should be easily accessible in the Library of every institution where the subject of statistics has a place in the curriculum
