Psychology and Mathematics Education Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from

rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

The Relation of Reported Preference to Performance in Problem Solving Herbert Lloyd Bowman,1929 Within the limits of this study certain tendencies with respect to preference and performance can be noted Individuals tend to select as a preference a problem out of a group of problems that they know or think will be more successful in solving The expectation of greater success leads individuals to prefer one problem over others and belief in success causes preference rather than preference being a cause of successful performance Problems dealing with actual childhood activities seem to be highly preferred by all pupils of the junior high school grades Interest in problem solving is enhanced by children working problems that are not too difficult and represent genuine childhood situations The relation between reported preference and performance is significant enough to demand attention when selecting problems for textbooks
