Transformations, Transmutations, and Kernel Functions, Volume II H Begehr,2023-06-16 Complex analytical methods are a powerful tool for special partial differential equations and systems To make these methods applicable for a wider class transformations and transmutations are used **Transformations, Transmutations, and Kernel Functions** Heinrich G. W. Begehr,2019 Complex analytical methods are a powerful tool for special partial differential equations and systems To make these methods applicable for a wider class transformations and transmutations are used *Transformations, Transmutations, and Kernel Functions, Volume I* Heinrich G. W. Begehr,Robert P. Gilbert,1992-12-14 A broad ranging collection of recent results in the subject covering areas from plane elasticity to second and higher order elliptic equations The chapters may be read individually providing a more accessible forum for the applications **Transformations, Transmutations, and Kernel Functions, Volume II** H Begehr,2023-06-16 Complex analytical methods are a powerful tool for special partial differential equations and systems To make these methods applicable for a wider class transformations and transmutations are used Transformations, Transmutations, and Kernel Functions, Volume II H Begehr,1993-09-23 Complex analytical methods are a powerful tool for special partial differential equations and systems To make these methods applicable for a wider class transformations and transmutations are used **Transmutation Operators and Applications** Vladislav V. Kravchenko,Sergei M. Sitnik,2020-04-11 Transmutation operators in differential equations and spectral theory can be used to reveal the relations between different problems and often make it possible to transform difficult problems into easier ones Accordingly they represent an important mathematical tool in the theory of inverse and scattering problems of ordinary and partial differential equations integral transforms and equations special functions harmonic analysis potential theory and generalized analytic functions This volume explores recent advances in the construction and applications of transmutation operators while also sharing some interesting historical notes on the subject Integral Transforms, Reproducing Kernels and Their Applications Saburo Saitoh,2020-11-25 The general theories contained in the text will give rise to new ideas and methods for the natural inversion formulas for general linear mappings in the framework of Hilbert spaces containing the natural solutions for Fredholm integral equations of the first kind **Transformation, Transmutation, and Kernel Functions** Heinrich G. W. Begehr,1990 **Theory of Reproducing Kernels and Applications** Saburo Saitoh,Yoshihiro Sawano,2016-10-14 This book provides a large extension of the general theory of reproducing kernels published by N Aronszajn in 1950 with many concrete applications In Chapter 1 many concrete reproducing kernels are first introduced with detailed information Chapter 2 presents a general and global theory of reproducing kernels with basic applications in a self contained way Many fundamental operations among reproducing kernel Hilbert spaces are dealt with Chapter 2 is the heart of this book Chapter 3 is devoted to the Tikhonov regularization using the theory of reproducing kernels with applications to numerical and practical solutions of bounded linear operator equations

In Chapter 4 the numerical real inversion formulas of the Laplace transform are presented by applying the Tikhonov regularization where the reproducing kernels play a key role in the results Chapter 5 deals with ordinary differential equations Chapter 6 includes many concrete results for various fundamental partial differential equations In Chapter 7 typical integral equations are presented with discretization methods These chapters are applications of the general theories of Chapter 3 with the purpose of practical and numerical constructions of the solutions In Chapter 8 hot topics on reproducing kernels are presented namely norm inequalities convolution inequalities inversion of an arbitrary matrix representations of inverse mappings identifications of nonlinear systems sampling theory statistical learning theory and membership problems Relationships among eigen functions initial value problems for linear partial differential equations and reproducing kernels are also presented Further new fundamental results on generalized reproducing kernels generalized delta functions generalized reproducing kernel Hilbert spaces and as well a general integral transform theory are introduced In three Appendices the deep theory of Akira Yamada discussing the equality problems in nonlinear norm inequalities Yamada's unified and generalized inequalities for Opial's inequalities and the concrete and explicit integral representation of the implicit functions are presented

Direct and Inverse Sturm-Liouville Problems Vladislav V. Kravchenko, 2020-07-28 This book provides an introduction to the most recent developments in the theory and practice of direct and inverse Sturm Liouville problems on finite and infinite intervals A universal approach for practical solving of direct and inverse spectral and scattering problems is presented based on the notion of transmutation transformation operators and their efficient construction Analytical representations for solutions of Sturm Liouville equations as well as for the integral kernels of the transmutation operators are derived in the form of functional series revealing interesting special features and lending themselves to direct and simple numerical solution of a wide variety of problems The book is written for undergraduate and graduate students as well as for mathematicians physicists and engineers interested in direct and inverse spectral problems

Generalized Analytic Functions Helmut Florian, 1998-05-31 Contains papers from a January 1997 conference at the Technical University of Graz Part I looks at generalized analytic functions dealing not only with problems in the complex plane but also related problems in higher dimensions where several complex variables and Clifford Analysis are used Part II is devoted to applications of partial differential equations to mechanics with contributions on boundary elements and asymptotic methods and hemivariational inequalities A substantial number of papers in Part II deal with problems of ocean acoustics No index Annotation copyrighted by Book News Inc Portland OR

Complex Methods for Partial Differential Equations Heinrich Begehr, A. Okay Celebi, W. Tutschke, 1999-11-30 The book contains review chapters as well as state of the art research chapters on topics ranging from complex elliptic first order systems and second order systems with regular or singular coefficients to overdetermined systems in several complex variables and partial differential equations in Clifford analysis Different boundary value problems are studied Applications to crack problems in elasticity theory to cusped bars

plates and shells are given Wavelet transformations are constructed in Banach spaces and used to identify complex analysis from the viewpoint of geometry Fixed point problems even in abstract Banach spaces are investigated with respect to an optimal domain of existence for the solution Audience Researchers working in the field as well as scientists interested in the applications
