Phosphoric Acid Rodney Gilmour, 2013-12-12 The rise and rationalization of the industrial phosphates industry have gone hand in hand with the development and maturation of technologies to purify phosphoric acid In the 1960s and 70s driven by the exponential sales growth of the detergent builder sodium tripolyphosphate chemical producers raced to

develop processes that would provide a sufficiently pure phosphoric acid feedstock for manufacture to undercut thermal phosphoric acid made from phosphorus As environmental and political pressure led to a collapse in demand for sodium tripolyphosphate in the 1990s the commercial pressures to rationalize at plant and corporate levels rose such that only the fittest survived Phosphoric Acid Purification Uses Technology and Economics the first and only book of its kind to be written on this topic covers the development of purification technologies for phosphoric acid especially solvent extraction describing the more successful processes and setting this period in the historical context of the last 350 years Individual chapters are devoted to the key derivative products which are still undergoing active development as well as to sustainability and how to approach the commissioning of these plants The text is aimed at students of chemistry chemical engineering business and industrial history and to new entrants to the industry

Membrane Technologies for Water Treatment Alberto Figoli, Jan Hoinkis, Jochen Bundschuh, 2016-02-18 Focuses on the application of membrane technologies in removing toxic metals metalloids from water Particular attention is devoted to the removal of arsenic uranium and fluoride These compounds are all existing in the earth's crust at levels between two and five thousands micrograms per kg parts per million on average and these compounds can be considered highly toxic to humans who are exposed to them primarily from air food and water In order to comply with the new maximum contaminant level numerous studies have been undertaken to improve established treatments or to develop novel treatment technologies for removing toxic metals from contaminated surface and groundwater Among the technologies available applicable for water treatment membrane technology has been identified as a promising technology to remove such toxic metals from water The book describes both pressure driven traditional processes such as Nanofiltration Reverse Osmosis Ultrafiltration etc and more advanced membrane processes such as forward osmosis membrane distillation and membrane bio reactors employed in the application of interest Key aspect of this book is to provide information on both the basics of membrane technologies and on the results depending on the type of technology employed
