Stone in Architecture Erhard Winkler,2013-03-14 The readers of the first two editions of *Stone Properties Durability in Man's Environment* were mostly architects restoration architects of buildings and monuments in natural stone professionals who sought basic technical information for non geologists The increasing awareness of rapidly decaying monuments and their rescue from loss to future generations have urged this writer to update the 1973 and 1975 editions now unavailable and out of print Due to the 20 year long interval extensive updating was necessary to produce this new book The present edition concentrates on the natural material stone as building stone dimension stone architectural stone and decorative field stones Recently the use of stone for thin curtain walls on buildings has become fashionable The thin slabs exposed to a new unknown complexity of stresses resulting in bowing of crystalline marble has attracted much negative publicity The costs of replacing white slabs of marble on entire buildings with its legal implications have led construction companies into bankruptcy We blame many environmental problems on acid rain Does acid rain really accelerate stone decay that much Stone preservation is being attempted with an ever increasing number of chemicals applied by as many specialists to save crumbling stone Chemists filled this need during a time of temporary job scarcity while the general geologist missed this opportunity he was too deeply involved in the search for fossil fuels and metals

[Stones for Building and Decoration](#) George Perkins Merrill,1891

Stones George P. Merrill,2015-07-21 Excerpt from *Stones For Building and Decoration* The work herewith presented is based upon

the author's handbook and catalogue of the collection of building and ornamental stones in the United States National Museum at Washington. It differs from that work however in many important particulars several new chapters having been added others rewritten and the whole so far as possible brought down to date. A portion of the added matter is essentially the same though in a somewhat different form as originally appeared in the columns of *Stone the American Architect* the *Scientific American Supplement* and other of our industrial journals. The writer's experience in preparing the extensive collection in the National Museum at Washington as well as its partial duplicate in the American Museum in New York City has afforded him ample opportunity for becoming acquainted with the quarry products of the country at large while extensive field trips particularly in the eastern and extreme western United States have given him a practical insight into the resources of the regions as well as some knowledge concerning the usual methods of quarrying and working. That there is a demand for a comprehensive and not too technical a work on this subject has been emphatically impressed upon the writer many times during the past few years. How far the pages herewith presented shall supply this demand it is left for the public to decide.
