The Face of the Earth J. Donald Hughes, 2015-05-11 Although the organizing principle of virtually every world history text is development the editor of this volume maintains that this traditional approach fails to address the issue of sustainability By adopting the ecological process as their major theme the authors show how the process of human interaction with the natural environment unfolded in the past and offer perspective on the ecological crises in our world at the beginning of the 21st century Topics range from broad regional studies that examine important aspects of the global environment that affect nations to a study of the widespread influence of one important individual on his nation and beyond The authors take different approaches but all share the conviction that world history must take ecological process seriously and they all recognize the ways in which the living and non living systems of the earth have influenced the course of human affairs

A Statement from the Author in Recognition of Earth Day 2024 Earth Day is a celebration of our planet the environmental goods and services it provides and the need to maintain our local to global environment in such a manner that these goods and services will continue to be provided in the centuries to come Toward that end it is necessary to understand the mechanisms that provide these services as well as the means by which they can be perturbed or destroyed This book is written with that in mind focusing on the science that controls the land water and air

upon which we depend rather than the many horror stories that could be written about what happens when we ignore or abuse the various aspects of the planet we call home With facts and figures at everyone's fingertips in the form of smartphones and more there is no need for a book to be cluttered with such discussions as the size of the last oil spill but rather the focus here is on understanding how for example the greenhouse effect works what drives ozone formation and how ozone depletion leads to cancer and how a photoelectric cell can convert sunlight into electricity The book is written for non science majors and does not assume any environmental background As such it is intended to promote a broad public that is sufficiently scientifically literate to make informed decisions in their jobs homes and purchasing that help us all move toward a more sustainable future

The Earth Around Us Jill Schneiderman, 2018-02-19 Soil contamination public lands surface and groundwater pollution coastal erosion global warming Have we reached the limits of this planet's ability to provide for us If so what can we do about it These vital questions are addressed in *The Earth Around Us* a unique collection of thirty one essays by a diverse array of today's foremost scientist writers Sharing an ability to communicate science in a clear and engaging fashion the contributors explore Earth's history and processes especially in relation to today's environmental issues and show how we as members of a global community can help maintain a livable planet The narratives in this collection are organized into seven parts that describe Earth's time and history and the place of people on it Views of nature and the ethics behind our conduct on Earth Resources for the twenty first century such as public lands healthy forests and soils clean ground and surface waters and fluctuating coastlines Ill informed local manipulations of landscapes across the United States Innovative solutions to environmental problems that arise from knowledge of the interactions between living things and the Earth's air water and soil Natural and human induced global scale perturbations to the earth system Our responsibility to people and all other organisms that live on Earth Never before has such a widely experienced group of prominent earth scientists been brought together to help readers understand how earth's environment works Driven by the belief that earth science is and should be an integral part of everyday life *The Earth Around Us* empowers all of us to play a more educated and active part in the search for a sustainable future for our planet and its inhabitants
