assessment of South Africa's land degradation problem taking into account not only agricultural and ecological concerns but also the socio-political and historical contexts. It places previously unavailable information in the hands of those who need it most: politicians, agricultural extension officers, and communal and commercial farmers. It will also be of interest to students and teachers. At once sobering, challenging, and optimistic, this book is a call to action. It shows that we are all affected by the extent of land degradation in South Africa.

In *NATURE'S DESTINY* Michael Denton builds a stunning step-by-step argument that the universe is a specifically designed whole with life and mankind as its fundamental goal and purpose. Drawing together evidence from many areas of biology including biochemistry, molecular biology, protein chemistry, and human physiology, as well as physics, geology, and evolutionary theory, he shows that life can only flourish on Earth-like structures. That sentient brains can occur only in a mammalian-like body with features very similar to ours. In short, though we may have six-fingered cousins elsewhere in the universe, the laws of nature are tuned to reach an endpoint in mankind. A dazzling and readable work of science, this is also in a very real sense the first work of natural theology in modern times.
