

UNDERSTANDING RISKS OF MANAGING OIL AND GAS WASTEWATER

Tanks and pits are used to store wastewater before it's treated, reused or disposed of.

Risks  

Trucks and pipes are used to transport wastewater.

Risks  

Though little is known about the risks to public health, a small amount of treated wastewater is released in the environment for other uses, - including to irrigate food crops.

Risks  

Water mixed with sand and chemicals is pumped underground to release oil and gas.

It mixes with underground water deposits before coming back to the surface - creating a large amount of salty and toxic waste.

Risks   

Most wastewater is disposed of in deep underground wells - away from people, plants, and animals.

Risks    

Some treated wastewater is discharged into rivers, lake and streams.

Risks  

 <p>SPILLS & LEAKS The majority of land and water contamination occurs when wastewater is spilled or leaked. This can happen when a pipe breaks, a well blows out, or other problems occur.</p>	 <p>BURDOWNS & WELL FAILURE If a well is not properly designed, constructed or maintained then blowouts, groundwater contamination and other problems can occur.</p>
 <p>EARTHQUAKES Disposal wells too close to fault lines can trigger earthquakes.</p>	 <p>EXPOSURE TO TOXIC CHEMICALS Some wastewater chemicals are poisonous to people, plants and animals in small concentrations.</p>
