Energy Research Abstracts ,1988 **Energy-Efficient Timber-Glass Houses** Vesna Žegarac Leskovar,Miroslav Premrov,2013-09-30 The book discusses combining timber and glass two eco materials with a view to developing an optimal contemporary energy efficient house with an attractive design Furthermore the book connects an architectural design approach with structural research to show the possibilities of stabilizing the building with an increased size of the glazing Research results where the glazing is considered as a load bearing structural element are therefore presented in a manner leading to the development of an optimal model of the timber glass house considering both the structural and energy related aspects The presented research work can be useful to designers and future experts in their planning of optimal energy efficient timber buildings The study is based on using timber and glass which were previously neglected as construction materials With suitable technological development and appropriate use they are nowadays becoming essential construction materials as far as energy efficiency is concerned However their combined use is extremely

complicated from both the constructional point of view as well as from that of energy efficiency and sets multiple traps for designers. A good knowledge of their advantages and drawbacks is thus vitally important which is shown in the present monograph. Energy efficient timber glass houses was selected by the Slovenian National Research Agency as an extraordinary scientific achievement in the field of technical sciences civil engineering for the year 2013.

Urban Sustainability and Energy Management of Cities for Improved Health and Well-Being González-Lezcano, Roberto Alonso, 2022-04-29 Global environmental challenges such as climate change rapid urbanization and human influence on the environment continue to grow. Many of these resulting risks lead to diseases and negative impacts on health and quality of life. It is now essential to develop more sustainable and healthy environments with greater focus on prevention by targeting the root causes of disease. Urban communities comprise a high concentration of services consumption and waste and represent an unsustainable pattern of urbanization that accelerates the decline of global ecosystems services rather than supporting them through the compensatory contributions of peri urban and rural areas. By focusing on reducing environmental and social risk factors almost a quarter of the global burden of disease can be avoided through better health promotion strategies and improved prevention and hygiene measures. *Urban Sustainability and Energy Management of Cities for Improved Health and Well Being* highlights the interdisciplinary connections between the environment and human health focusing on new ideas and suggestions for promoting both sustainable development and human health and well being. It creates a new approach to the analysis of human impacts on the natural environment and conversely determines how the environment can modulate human lifestyles and health. Furthermore this book explores opportunities and challenges urban communities face as they seek to become sustainable systems embedded in their diverse and complex social and environmental contexts. Covering topics such as affordable housing ecological waste materials and urban health this premier reference source is an essential resource for environmentalists civil engineers government officials architects libraries students and educators of higher education urban planners researchers and academicians.
