## **System Level Synthesis:**

### *System-level Modelling and Design Space Exploration for Multiprocessor Embedded System-on-chip Architectures*

Cagkan Erbas,2006 Modern embedded systems come with contradictory design constraints On one hand these systems often target mass production and battery based devices and therefore should be cheap and power efficient On the other hand they still need to show high sometimes real time performance and often support multiple applications and standards which requires high programmability This wide spectrum of design requirements leads to complex heterogeneous System on Chip SoC architectures consisting of several types of processors from fully programmable microprocessors to configurable processing cores and customized hardware components integrated on a single chip This study targets such multiprocessor embedded systems and strives to develop algorithms methods and tools to deal with a number of fundamental problems which are encountered by the system designers during the early design stages

### *System-Level Synthesis* Ahmed Amine

Jerraya,Jean Mermet,2012-12-06 System Level Synthesis deals with the concurrent design of electronic applications including both hardware and software The issue has become the bottleneck in the design of electronic systems including both hardware and software in several major industrial fields including telecommunications automotive and aerospace engineering The major difficulty with the subject is that it demands contributions from several research fields including system specification system architecture hardware design and software design Most existing book cover well only a few aspects of system level synthesis The present volume presents a comprehensive discussion of all the aspects of system level synthesis Each topic is covered by a contribution written by an international authority on the subject

### **Models in System**

**Design** Jean-Michel Bergé,Oz Levia,Jacques Rouillard,2012-12-06 Models in System Design tracks the general trend in electronics in terms of size complexity and difficulty of maintenance System design is by nature combined with prototyping mixed domain design and verification and it is no surprise that today s modeling and models are used in various levels of system design and verification In order to deal with constraints induced by volume and complexity new methods and techniques have been defined Models in System Design provides an overview of the latest modeling techniques for use by system designers The first part of the book considers system level design discussing such issues as abstraction performance and trade offs There is also a section on automating system design The second part of the book deals with some of the newest aspects of embedded system design These include co verification and prototyping Finally the book includes a section on the use of the MCSE methodology for hardware software co design Models in System Design will help designers and researchers to understand these latest techniques in system design and as such will be of interest to all involved in embedded system design
