## What is the vascular system?

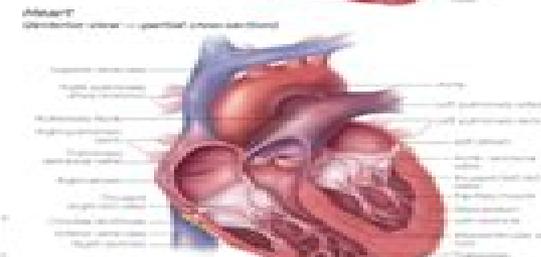

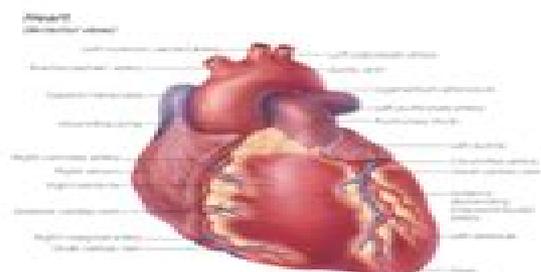

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

## Molecular system circulations

Artery	Vein
Capillary	Capillary
Artery	Vein
Artery	Vein

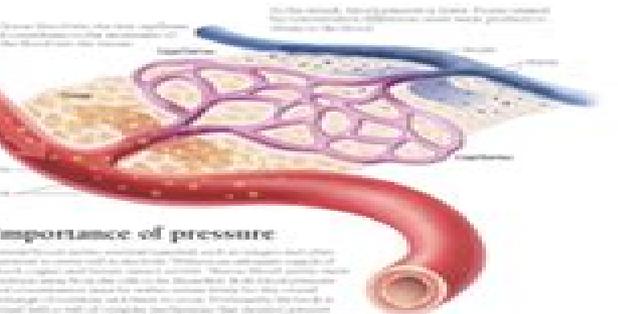

## The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right and left atria and ventricles. The heart is surrounded by a protective sac called the pericardium.

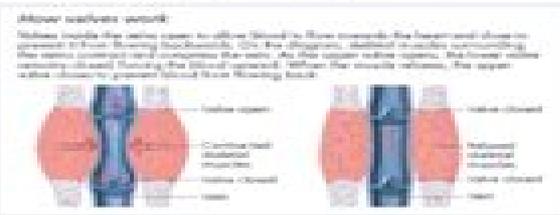

## Blood vessels

Blood vessels are the network of tubes that carry blood throughout the body. They are divided into arteries, veins, and capillaries. Arteries carry oxygenated blood away from the heart, while veins carry deoxygenated blood back to the heart.

## Importance of pressure

Pressure is essential for the flow of blood through the vascular system. The heart generates the pressure that drives blood through the arteries and capillaries. The pressure in the veins is much lower, and the blood is returned to the heart by the action of the heart and the skeletal muscle pump.
