Verifying Concurrent Processes Using Temporal Logic B. T. Hailpern, 1982-03      **Verifying Concurrent Processes Using Temporal Logic** Brent Tzion Hailpern, 1982      Verifying concurrent processes using temporal logic Brent T. Hailpern, 1982      Verifying Concurrent Processes Using Temporal Logic Brent Tzion Hailpern, Stanford University. Computer Systems Laboratory, 1980      **Communicating Process Architectures 2008** P. H. Welch, 2008 Communicating Process Architectures 2008 contains the proceedings of the thirty first Communicating Process Architectures Conference CPA 2008 organized under the auspices of WoTUG and the Department of Computer Science of the University of York The aim of this book is to cover both theoretical aspects and industrial applications of Communicating Processes Two invited speakers have given excellent contributions to this topic Professor Samson Abramsky has worked in the areas of semantics and logic of computation and concurrency His work on game semantics considers interaction and information flow between multiple agents and their environment This has yielded new approaches to compositional model checking and to analysis for programs with state concurrency probability and other features Professor Colin O Halloran has been instrumental in the uptake of formal methods in the development and verification of high assurance systems on an industrial scale His research interests are in automating the use of formal methods and using these techniques at reasonable cost and on an industrial scale      **Verification of Digital and Hybrid Systems** M. Kemal Inan, Robert P. Kurshan, 2012-12-06 This book grew out of a NATO Advanced Study Institute summer school that was held in Antalya TURkey from 26 May to 6 June 1997 The purpose of the summer school was to expose recent advances in the formal verification of systems composed of both logical and continuous time components The course was structured in two parts The first part covered theorem proving system automaton models logics tools and complexity of verification The second part covered modeling and verification of hybrid systems i e systems composed of a discrete event part and a continuous time part that interact with each other in novel ways Along with advances in microelectronics methods to design and build logical systems have grown progressively complex One way to tackle the problem of ensuring the error free operation of digital or hybrid systems is through the use of formal techniques The exercise of comparing the formal specification of a logical system namely what it is supposed to do to its formal operational description what it actually does in an automated or semi automated manner is called verification Verification can be performed in an after the fact manner meaning that after a system is already designed its specification and operational description are regenerated or modified if necessary to match the verification tool at hand and the consistency check is carried out      **Time & Logic** Leonard Bolc, Andrzej Szalas, 2019-10-24 Originally published in 1995 Time and Logic examines understanding and application of temporal logic presented in computational terms The emphasis in the book is on presenting a broad range of approaches to computational applications The techniques used will also be applicable in many cases to formalisms beyond temporal logic alone and it is hoped that adaptation to many different logics

of program will be facilitated Throughout the authors have kept implementation orientated solutions in mind The book begins with an introduction to the basic ideas of temporal logic Successive chapters examine particular aspects of the temporal theoretical computing domain relating their applications to familiar areas of research such as stochastic process theory automata theory established proof systems model checking relational logic and classical predicate logic This is an essential addition to the library of all theoretical computer scientists It is an authoritative work which will meet the needs both of those familiar with the field and newcomers to it

**Verification of Reactive Systems** Klaus Schneider, 2013-03-09 Reactive systems are becoming more and more important for essentially all areas of technical and professional activities as well as for many areas of everyday life The design of these systems is a great challenge and requires sound compromises between safety and time to market To meet these needs early design phases nowadays include verification of given specifications against system descriptions to find potential design errors as early as possible This book is devoted to the foundation of the most popular formal methods for the specification and verification of reactive systems In particular the calculus omega automata and temporal logics are covered in full detail their relationship and state of the art verification procedures based on these formal approaches are presented Furthermore the advantages and disadvantages of the formalisms from particular points of view are analyzed Most results are given with detailed proofs so that the presentation is almost self contained This book is targeted to advanced students lecturers and researchers in the area of formal methods
