**Space Law** Marietta Benkő, Kai-Uwe Schrogl, Denise Digrell, Esther Jolley, 2005 The contributions in this book reflect on the growing diversification of space law and is divided in two parts The first part provides a look at the current developments in international space law and regulation and the second part investigates future perspectives of this process It is only recently that international space law entered its third phase of development While the first phase between the 1960s and 1970s was characterized by the elaboration of international conventions in the framework of the United Nations the second phase saw the adoption of special legal regimes in the form of UN General Assembly Resolutions which were dealing with issues like direct broadcasting by satellites DBS remote sensing RS and the use of nuclear power sources NPS in outer space The third and current phase received its impetus from the growing commercialization of space activities and their emerging privatization Therefore the main characteristics of this period relate to the efforts of adapting international space law to these recent changes and of finding ways and means to reconcile State interests with commercial perspectives This book forms a welcome addition to any collection in the field of space law and is a refreshing contribution to the discussion in the field
