Spatial Analysis In Archaeology:

Spatial Analysis in Archaeology Ian Hodder, Clive Orton, 1976-10-14 This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques. The authors show how these techniques when sensitively employed can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships. Techniques of interpretation by inspection can now be made more powerful and rigorous at the same time interest has turned from the examination of such sites and artefacts as things to the spatial relationships between such things their relationships to one another and to landscape features soils and other resources. This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists. It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates for example in studies of exchange networks trade and settlement patterns and cultural history.

Intrasite Spatial Analysis in Archaeology Harold Hietala, Paul A. Larson, 1984-11-08 Collection of theoretical discussions and case studies paper by B Spurling and B Hayden separately annotated

Archaeological Spatial Analysis Mark Gillings, Piraye Hacıgüzeller, Gary Lock, 2020-01-16 Effective spatial analysis is an essential element of archaeological research. This book is a unique guide to choosing the appropriate technique, applying it correctly and understanding its implications both theoretically and practically. Focusing upon the key techniques used in archaeological spatial analysis, this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus. Each chapter tackles a specific technique or application area and follows a clear and coherent structure. First is a richly referenced introduction to the particular technique followed by a detailed description of the methodology, then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology. The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals.

Space and Spatial Analysis in Archaeology University of Calgary. Archaeological Association. Conference, Elizabeth C. Robertson, 2006 The archaeology of space and place is examined in this selection of papers from the 34th annual Chacmool Archaeological Conference.

Spatial Technology and Archaeology David Wheatley, Mark Gillings, 2013-02-05 Geographical Information Systems GIS and related spatial technologies have a new and powerful role to play in archaeological interpretation. Beginning with a conceptual approach to the representation of space adopted by GIS, this book examines spatial databases, the acquisition and compilation of data, the analytical compilation of data, the analytical functionality of GIS and the creation and utilization of critical foundation data layers such as the Digital Elevation Model DEM. The ways in which GIS can most usefully facilitate archaeological analysis and interpretation are then explored particularly as a tool for the management of

archaeological resources Formal analysis of archaeological material and the use of trend surface contouring and interpolation procedures are considered along with predictive modeling analysis of visibility and intervisibility Finally there is a discussion of leading edge issues including three dimensional GIS object oriented GIS the relationship between GIS and Virtual Reality technologies and the integration of GIS with distributed systems and the Internet The approach is light and technical detail is kept to a minimum recognizing that most readers are simply interested in using GIS effectively The text is carefully illustrated with worked case studies using archaeological data Spatial Technology and Archaeology provides a single reference source for archaeologists students professionals and academics in archaeology as well as those in anthropology and related disciplines Spatial Analysis in Archaeology [in Japanese]. Ian Hodder,1984 **Some Applications of Spatial Analysis in Archaeology** Ian Richard Hodder,1976 **Geographical Information Systems in Archaeology** James Conolly,Mark Lake,2006-05-04 Geographical Information Systems has moved from the domain of the computer specialist into the wider archaeological community providing it with an exciting new research method This clearly written but rigorous book provides a comprehensive guide to that use Topics covered include the theoretical context and the basics of GIS data acquisition including database design interpolation of elevation models exploratory data analysis including spatial queries statistical spatial analysis map algebra spatial operations including the calculation of slope and aspect filtering and erosion modeling methods for analysing regions visibility analysis network analysis including hydrological modeling the production of high quality output for paper and electronic publication and the use and production of metadata Offering an extensive range of archaeological examples it is an invaluable source of practical information for all archaeologists whether engaged in cultural resource management or academic research This is essential reading for both the novice and the advanced user Spatial analysis and social spaces Eleftheria Paliou,Undine Lieberwirth,Silvia Polla,2014-04-01 In the past decade a range of formal spatial analysis methods has been developed for the study of human engagement experience and socialisation within the built environment Many although not all of these emanate from the fields of architectural and urban studies and draw upon social theories of space that lay emphasis on the role of visibility movement and accessibility in the built environment These approaches are now gaining in popularity among researchers of prehistoric and historic built spaces and are given increasingly more weight in the interpretation of past urban environments Spatial Analysis and Social Spaces brings together contributions from specialists in archaeology social theory and urban planning who explore the theoretical and methodological frameworks associated with the application of new and established spatial analysis methods in past built environments The focus is mainly on more recent computer based approaches and on techniques such as access analysis visibility graph analysis isovist analysis agent based models of pedestrian movement and 3D visibility approaches The contributors to this volume examine the relationship between space and social life from many different perspectives and provide illuminating examples from the archaeology of Greece Italy and Cyprus in which intra site

analysis offers valuable insights into the built spaces and societies under study

Beyond the Map Gary R. Lock, 2000 This set of papers by European and North American archaeologists explore the interface between new spatial technologies and areas of theoretical concern in spatial archaeology Differing aspects of landscape such as vision perception and movement are explored through a series of case studies that focus on how spatial technologies can influence archaeological interpretation and to what extent these new technologies can be manipulated to take us beyond 2 dimensional maps Individual site based analyses and new applications of predictive modelling are also presented and assessed together with the wider questions of spatial technologies within heritage management

Geographical Information Systems in Archaeology James Conolly, Mark Lake, Mark W. Lake, 2006-05-04 Geographical Information Systems has moved from the domain of the computer specialist into the wider archaeological community providing it with an exciting new research method This clearly written but rigorous book provides a comprehensive guide to that use Topics covered include the theoretical context and the basics of GIS data acquisition including database design interpolation of elevation models exploratory data analysis including spatial queries statistical spatial analysis map algebra spatial operations including the calculation of slope and aspect filtering and erosion modeling methods for analysing regions visibility analysis network analysis including hydrological modeling the production of high quality output for paper and electronic publication and the use and production of metadata Offering an extensive range of archaeological examples it is an invaluable source of practical information for all archaeologists whether engaged in cultural resource management or academic research This is essential reading for both the novice and the advanced user

Spatial Technology and Archaeology David Wheatley, **The Interpretation of Archaeological Spatial Patterning** Ellen M. Kroll, T. Douglas Price, 1991-02-28 Investigations of archaeological intrasite spatial patterns have generally taken one of two directions studies that introduced and explored methods for the analysis of archaeological spatial patterns or those that described and analyzed the formation of spatial patterns in actualistic ethnographic experimental or natural contexts The archaeological studies were largely quantitative in nature concerned with the recognition and definition of patterns the actualistic efforts were often oriented more toward interpretation dealing with how patterns formed and what they meant Our research group on archaeological spatial analysis at the University of Wisconsin Madison has been working for several years on both quantitative and interpretive problems Both lines of investigation are closely related and are important complements In order to demonstrate the convergence of archaeological and actualistic studies for the understanding of intrasite spatial patterns we organized a symposium at the 52nd Annual Meeting of the Society of American Archaeology in Toronto Canada in May 1987 The symposium titled The Interpretation of Stone Age Archaeological Spatial Patterns was organized into two sessions The six papers presented in the morning session five of which comprise Part I of this volume focused on ethnoarchaeological and experimental research Michael Schiffer was the discussant for this half of the symposium Our intention for the ethnoarchaeological contributions to

the symposium and volume was the delineation of some of the significant accomplishments achieved thus far by actualistic studies regarding the formation of spatial patterns Computer Graphics in Archaeology Steadman Upham,1979

Intrasite Spatial Analysis of Mobile and Semi-sedentary Peoples Amy Elizabeth Clark,Joseph A. M. Gingerich,2022 In the 1980s and early 1990s a number of studies were published on intrasite spatial analysis following a surge of ethnoarchaeological work from the previous decade Many of these publications were edited volumes that dealt with the arrangement of artifacts within individual archaeological horizons from a range of site types and were focused on mobile peoples huntergatherers They are now at least thirty years old This volume focuses on current studies and new offerings of intrasite spatial analysis During the intervening years different approaches to intrasite spatial analysis were developed based on higher quality data technological innovations and a more sophisticated understanding of what processes govern spatial patterning in the archaeological record **Space - Archaeology's Final Frontier? An Intercontinental Approach** Dustin Keeler,Roderick B. Salisbury,2009-03-26 This book discusses the cultural social and archaeological aspects of space and the impact of spatial concepts in practical archaeological case studies It summarizes recent developments and looks to the future exploring some of the cutting edge ideas in spatial method and theory The past decade has seen significant advances in the tools available for spatial analysis in archaeology and theory and method regarding the spatial character of archaeology must keep pace with these advances Geomorphological and geochemical techniques geographic information systems remotely sensed data virtual reality and electronic survey technology provide new opportunities but also require new ideas This book gives us insight into the ways that people have used space to subsist to recreate their culture in their homelands or in new areas or impose their culture on others Contributors address the way archaeological notions of space and deep time can add to society's understanding of landscape social relationships past environment and cultural heritage The contributions from Europe and North America demonstrate intercontinental connections and explore ways of using dynamic models of spatial patterning to assess human activity within natural and cultural landscapes **Intrasite Spatial Analysis of Mobile and Semisedentary Peoples** Amy E. Clark,Joseph A. M. Gingerich,2022-01-31 Describing the nature and meaning of artifact spatial patterning can be highly subjective yet many patterns can be quantified to create general models that are comparable across time periods and geographic space The authors employ various techniques in this endeavor including large sample sizes model driven analyses of the ethnographic record bone and lithic refitting and a careful consideration of artifact attributes that elucidate spatial patterning Such detailed analyses allow archaeologists to better interpret site formation processes and address large scale anthropological questions This volume includes studies that span archaeological and ethnographic contexts from highly mobile Paleoindian foragers to semi sedentary preagriculturalists of the Epipaleolithic and modern pastoralists in Mongolia The authors hold that commonalities in human behavior lead to similar patterns in the organization and maintenance of space by people They present a series of ideas and approaches to make it easier to

recognize universals in human behaviors which allow archaeologists to better compare intrasite spatial patterns The book creates a baseline for new intrasite spatial analyses in the twenty first century **Spatial Archaeology** David L. Clarke,1977 **Computational Approaches to Archaeological Spaces** Andrew Bevan,Mark Lake,2013-08-31
