Spatial Cognition An Interdisciplinary Approach To Representing And Processing Spatial Knowledge:

Spatial Cognition Christian Freksa, Christopher Habel, Karl F. Wender, 2003-05-20 Research on spatial cognition is a rapidly evolving interdisciplinary enterprise for the study of spatial representations and cognitive spatial processes be they real or abstract human or machine Spatial cognition brings together a variety of search methodologies empirical investigations on human and animal orientation and navigation studies of communicating spatial knowledge using language and graphical or other pictorial means the development of formal models for representing and processing spatial knowledge and computer implementations to solve spatial problems to simulate human or animal orientation and navigation behavior or to reproduce spatial communication patterns These approaches can interact in interesting and useful ways Results from empirical studies call for formal explanations both of the underlying memory structures and of the processes operating upon them we can develop and implement operational computer models obeying the relationships between objects and events described by the formal models we can empirically test the computer models under a variety of conditions and we can compare the results to the results from the human or animal experiments A disagreement between these results can provide useful indications towards the refinement of the models

Spatial Cognition, 1998
Spatial Cognition Thomas Barkowsky, Christian Freksa, 2014-09-01 *Space, Time, and the Use of Language* Thora Tenbrink, 2008-09-25 Does temporal language depend on spatial language This widespread view is intuitively appealing since spatial and temporal expressions are often similar or identical Also metaphors consistently express temporal phenomena in terms of spatial language pointing to a close semantic and conceptual relationship But what about the application of the two kinds of linguistic expressions in natural discourse The book draws together findings on terms that describe the relation of objects or events to each other such as in front behind before after etc highlighting the relationship between cognition and

language usage Using the method of cognitively motivated discourse analysis novel empirical results are presented to complement earlier findings The detailed investigation of a selected range of terms that appear to be parallel in space and time highlights both similarities and fundamental differences in their application As a result a new picture emerges The concepts of space and time are represented in language usage in various systematic ways reflecting how we understand the world and at the same time reflecting how our concepts of space and time differ fundamentally The volume contributes to a debate that has been of interest for cognitive linguists for several decades concerning the understanding of transfer processes between two conceptually intertwined domains The specific contribution of this work consists of addressing the novel question of how such processes come into play in the actual application of relevant expressions in natural discourse By adopting established approaches from Discourse Analysis for issues that are deeply rooted in interdisciplinary research in Cognitive Science insights are drawn together from two hitherto largely unrelated fields of research to approach the topic from an original perspective leading to a deeper understanding of the relationship between the domains of space and time and their expression in language

Spatial Cognition, 2005 *Representations in Mind and World* Jeffrey M. Zacks, Holly A. Taylor, 2017-07-20 This volume pulls together interdisciplinary research on cognitive representations in the mind and in the world The chapters from cutting edge researchers in psychology philosophy computer science and the arts explore how structured representations determine cognition in memory spatial cognition information visualization event comprehension and gesture It will appeal to graduate level cognitive scientists technologists philosophers linguists and educators

ECAI 2004 Ramon López de Mántaras, Lorenza Saitta, 2004 This is the Golden Age for Artificial Intelligence The world is becoming increasingly automated and wired together This also increases the opportunities for AI to help people and commerce Almost every sub field of AI had now been used in substantial applications Some of the fields highlighted in this publication are CBR Technology Model Based Systems Data Mining and Natural Language Techniques Not only does this publication show the activities capabilities and accomplishments of the sub fields it also focuses on what is happening across the field as a whole

Proceedings of Eurocogsci 03 Franz Schmalhofer, Richard M. Young, Graham Katz, Katz Graham, 2019-05-20 The aim of the European Cognitive Science Conference is the presentation of empirical theoretical and analytic work from all areas of interest in cognitive science such as artificial intelligence education linguistics neuroscience philosophy psychology and anthropology The focus is on interdisciplinary work that is either of interest for more than one of the research areas mentioned or integrates research methods from different fields With contributions by cognitive scientists from 20 different countries the papers in this volume reflect the origins of this conference as well as its international scope

Information Fusion and Geographic Information Systems Vasily V. Popovich, Manfred Schrenk, Kyrill V. Korolenko, 2007-10-29 These Proceedings of the Third International Workshop introduce research results in the areas of information integration development of GIS and GIS applications for a wide spectrum of information systems varying considerably in purpose and

scale The new class of GIS intelligent GIS is considered including principles of their building and programming technologies Special attention is drawn to the development of ontologies and their use in GIS and GIS applications

Context-specific Route Directions Kai-Florian Richter,2008 Route directions assist people in unfamiliar environments In order to be useful these route directions should reflect human conceptualization of wayfinding situations they should be well memorable and they should cover the spatial situations to be encountered while following a route In this thesis Guard is presented a process for generating context specific route directions that cover these properties Jacket

Frames of Reference and Direct Manipulation Based Navigation Asaf Friedman,2005 The analysis showed that the lack of realism of these systems means that they do not offer a sense of reality because of the user s inability to interact easily with the computer to navigate among represented objects The user cannot 1 Plan a course from a given location to a desired one 2 Shift the direction of their gaze and focus attention to objects as they move across a path 3 Move around an object keeping track of this change in relation to the surrounding objects 4 Turn an object in front of the viewer in order to examine it This lack of sense of reality cannot be simply improved by adding attributed to the system that are more realistic details shadows and reflections
