**Statistical Issues in Drug Development** Stephen S. Senn, 2008-02-28 Drug development is the process of finding and producing therapeutically useful pharmaceuticals turning them into safe and effective medicine and producing reliable information regarding the appropriate dosage and dosing intervals With regulatory authorities demanding increasingly higher standards in such developments statistics has become an intrinsic and critical element in the design and conduct of drug development programmes *Statistical Issues in Drug Development* presents an essential and thought provoking guide to the statistical issues and controversies involved in drug development This highly readable second edition has been updated to include Comprehensive coverage of the design and interpretation of clinical trials Expanded sections on missing data equivalence meta analysis and dose finding An examination of both Bayesian and frequentist methods A new chapter on pharmacogenomics and expanded coverage of pharmaco epidemiology and pharmaco economics Coverage of the ICH guidelines in particular ICH E9 *Statistical Principles for Clinical Trials* It is hoped that the book will stimulate dialogue between statisticians and life scientists working within the pharmaceutical industry The accessible and wide ranging coverage make it essential reading for both statisticians and non statisticians working in the pharmaceutical industry regulatory bodies and medical research institutes There is also much to benefit undergraduate and postgraduate students whose courses include a medical statistics component

Giampiero Favato, 2001 Over the last decade the approach to strategic management of Drug Development has been progressively rationalised in parallel to the development of financial and risk analysis quantitative models This book examines the evolution of R D risk adjusted models arguing that financial evaluation has progressively moving away from deterministic quantitative analysis in favour of non linear stochastic algorithms The relentless quest for capturing the value of Pharmaceutical Research will demand for a new emphasis on integration among disciplines and models The application of risk adjusted evaluation models to earlier stages of the discovery process is an important area for further research and value creation

Shein-Chung Chow, 2019-11-18 Statistical methods that are commonly used in the review and approval process of regulatory submissions are usually referred to as statistics in regulatory science or regulatory statistics. In a broader sense, statistics in regulatory science can be defined as valid statistics that are employed in the review and approval process of regulatory submissions of pharmaceutical products. In addition, statistics in regulatory science are involved with the development of regulatory policy guidance and regulatory critical clinical initiatives related research. This book is devoted to the discussion of statistics in regulatory science for pharmaceutical development. It covers practical issues that are commonly encountered in regulatory science of pharmaceutical research and development, including topics related to research activities, review of regulatory submissions, recent critical clinical initiatives, and policy guidance development in regulatory science. Devoted entirely to discussing statistics in regulatory science for pharmaceutical development, it reviews critical issues, e.g., endpoint margin selection and complex innovative design such as adaptive trial design in the pharmaceutical development and regulatory approval process. It clarifies controversial statistical issues, e.g., hypothesis testing versus confidence interval approach, missing data, estimands, multiplicity, and Bayesian design, and approach in review and approval of regulatory submissions. It proposes innovative thinking regarding study designs and statistical methods, e.g., n of 1 trial design, adaptive trial design, and probability monitoring procedure for sample size for rare disease drug development. It provides insight regarding current regulatory clinical initiatives, e.g., precision personalized medicine, biomarker driven target clinical trials, model informed drug development, big data analytics, and real world data evidence. This book provides key statistical concepts, innovative designs, and analysis methods that are useful in regulatory science. Also included are some practical, challenging, and controversial issues that are commonly seen in the review and approval process of regulatory submissions.
