Environmental Literacy in Science and Society Roland W. Scholz,2011-07-21 In an era where humans affect virtually all of the earth s processes questions arise about whether we have sufficient knowledge of human environment interactions How can we sustain the Earth s ecosystems to prevent collapses and what roles should practitioners and scientists play in this process These are the issues central to the concept of environmental literacy This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development Approaching the topic from multiple perspectives it explores the development of human understanding of the environment and human environment interactions in the fields of biology psychology sociology

Field, 2023-07-21 The connection between humans and the earth's natural resources is a topic of vital interest Concern once centered on whether there were sufficient supplies of natural resources to accommodate the rising demands of growing economies a newer concern is whether those growing economies will undermine the linkages between humans and the earth's critical ecological endowments It is essential to understand the reciprocity of how human decisions affect resources and how resources affect humans Natural resource economics is one way of framing and analyzing choices about the conservation and use of natural resources made daily by individuals communities and nations The focus of the text is on natural resource valuation economic incentives and the institutional arrangements that will produce desired collective outcomes The fourth edition of this acclaimed text presents the analytical framework of economics in easy to understand descriptions for readers who have not yet been exposed to economics The first nine chapters offer a lucid introduction to fundamental economic principles and their application to questions about natural resource use Ten topical chapters address specific natural resources The final two chapters examine natural resource issues encountered in developing countries and the impacts of globalization on the utilization and conservation of natural resources Topics new to this edition include equity issues in natural resources decisions existence value of wildlife technological change natural capital payment for environmental services rare earths food security and collective property rights

Robalino, 2000 One of the topics that has emerged during the last decade in the policy agenda of national governments and international organizations is the design of policies that seek long term economic growth while improving and sustaining the environment The analysis of this type of policies is usually based on macroeconomic models which link changes in policy instruments e g fiscal policy pollution taxes carbon permits energy subsidies to some outcome measure such as aggregate output or consumption Critical assumptions within these models are related to the dynamics of technology related variables such as total factor productivity or the carbon intensity of the economy Usually these dynamics are defined exogenously or endogenized by formalizing the effects of changes in input prices or R D investments Nonetheless the micro process of technology adoption where decentralized heterogeneous economic agents interact and share information about the dynamics of the economy and the characteristics of new technologies has been always ignored Yet it is this process which is behind the diffusion of new technologies and ultimately the dynamics of macro variables such as the carbon intensity of the economy **Bibliographic Index**, 2009
