Bauer, 2017-06-26 This book discusses the ways in which science the touchstone of reliable knowledge in modern society changed dramatically in the second half of the 20th century becoming less trustworthy through conflicts of interest and excessive competitiveness Fraud became common enough that organized efforts to combat it now include a federal Office of Research Integrity Competent minority opinions are sometimes thereby suppressed with the result that policy makers the media and the public are presented with biased or incomplete information Evidence tending to challenge established theories is sometimes rejected without addressing its substance While most would agree in the abstract that science can go wrong few would consider despite interesting contrary evidence that official consensus about the origins of the universe or the causes of global warming might be mistaken *Science* John Michels, 1927 Vols for 1911 13 contain the Proceedings of the Helminthological Society of Washington ISSN 0018 0120 1st 15th meeting Choice Richard Harper, Dave Randall, Wes Sharrock, 2016-01-21 We make decisions every day Yet we are sometimes perplexed by these decisions and the decisions of others To complicate things further we live in an age where there are more things to choose from than ever before the Internet is transforming our choices and making us more accountable for them what we choose is recorded modelled and used to predict our future behaviour So are we in a position to make better choices today than we were a decade ago Certainly there are some who believe so Psychologists claim we are subject to hidden mental processes that lead us to one thing rather than another economists offer predictions about what people will buy and some philosophers claim that our choices echo our evolutionary past Are these claims merited Do they reflect the beginnings of a

new science of choice This book offers a critical overview of these and other claims showing where they are justified and where they are exaggerated It will be an essential reference for anyone interested in whether science can help us to understand both the ways people make choices in their everyday lives and how these may be changing
