## Space And Time:

*Space, Time, and Spacetime* Lawrence Sklar, 1977-03-15 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy The arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

**Space, Time, and Stuff** Frank Arntzenius, Cian Seán Dorr, 2012-01-19 Frank Arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure He argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

*Space, Time and Number in the Brain* Stanislas Dehaene, Elizabeth Brannon, 2011-07-13 The study of mathematical cognition and the ways in which the ideas of space time and number are encoded in brain circuitry has become a fundamental issue for neuroscience How such encoding differs across cultures and educational level is of further interest in education and neuropsychology This rapidly expanding field of research is overdue for an interdisciplinary volume such as this which deals with the neurological and psychological foundations of human numeric capacity A uniquely integrative work this volume provides a much needed compilation of primary source material to researchers from basic neuroscience psychology developmental science neuroimaging neuropsychology and theoretical biology The first comprehensive and authoritative volume dealing with

G. Friedlander,1975 This book gives a rigorous discussion of the local effects of curvature on the behaviour of waves In the course of this discussion many techniques are developed which are also needed for a study of more general problems in which the gravitational field itself plays a dynamical role **Space, Time and Einstein** J. B. Kennedy,2003 This work covers the philosophical heart of the issues of space and time It introduces the revolutionary ideas of Einstein along with the concepts and arguments of philosophers both ancient and modern which have proved of lasting value The text serves to introduce the subject for beginning students as well as provide a clear statement of the state of the debate for a popular science readership Topics include Einstein s special and general relativity how to build an atom bomb the four dimensional universe the possibility of time travel the impossibility of motion whether space curves the big bang black holes as well as an inflationary and accelerating universe The Ways of Knowing William Pepperell Montague,1925 Science, Truth, Religion and Ethics as Foundations of a Rational Philosophy of Life Harry Mann Gordin,1924 Einstein's Theories of Relativity and Gravitation James Malcolm Bird,1921 Einstein s theory of relativity confounded and excited both professional and amateur scientists with its explanation of the intricacies of how the world and the universe truly work rather than how people wished or believed they worked His view of relativity dismantled Newton s theory of space and time as absolutes adding the concept of curved space time which deals with the velocity of motion Einstein explains his theory of physics in a way that was designed not only for scientists with a knowledge of the complicated math involved but for the general reader as well *The Teachers' Aid* ,1890 The Principles of Dynamics. An Elementary Text-book, Etc Richard Wormell,1876 **Philosophy of Physics** Tim Maudlin,2012-07-22 Philosophical foundations of the physics of space time This concise book introduces nonphysicists to the core philosophical issues surrounding the nature and structure of space and time and is also an ideal resource for physicists interested in the conceptual foundations of space time theory Tim Maudlin s broad historical overview examines Aristotelian and Newtonian accounts of space and time and traces how Galileo s conceptions of relativity and space time led to Einstein s special and general theories of relativity Maudlin explains special relativity with enough detail to solve concrete physical problems while presenting general relativity in more qualitative terms Additional topics include the Twins Paradox the physical aspects of the Lorentz FitzGerald contraction the constancy of the speed of light time travel the direction of time and more Introduces nonphysicists to the philosophical foundations of space time theory Provides a broad historical overview from Aristotle to Einstein Explains special relativity geometrically emphasizing the intrinsic structure of space time Covers the Twins Paradox Galilean relativity time travel and
