**Common Data Sense for Professionals** Rajesh Jugulum, 2022-01-27 Data is an intrinsic part of our daily lives Everything we do is a data point Many of these data points are recorded with the intent to help us lead more efficient lives We have apps that track our workouts sleep food intake and personal finance We use the data to make changes to our lives based on goals we have set for ourselves Businesses use vast collections of data to determine strategy and marketing Data scientists take data analyze it and create models to help solve problems You may have heard of companies having data management teams or chief information officers CIOs or chief data officers CDOs etc They are all people who work with data but their function is more related to vetting data and preparing it for use by data scientists The jump from personal data usage for self betterment to mass data analysis for business process improvement often feels bigger to us than it is In turn we often think big data analysis requires tools held only by advanced degree holders Although advanced degrees are certainly valuable this book illustrates how it is not a requirement to adequately run a data science project Because we are all already data users with some simple strategies and exposure to basic analytical software programs anyone who has the proper tools and determination can solve data science problems The process presented in this book will help empower individuals to work on and solve data related challenges The goal of this book is to provide a step by step guide to the data science process so that you can feel confident in leading your own data science project To aid with clarity and understanding the author presents a fictional restaurant chain to use as a case study illustrating how the various topics discussed can be applied Essentially this book helps traditional businesspeople solve data related problems on their own without any hesitation or fear The powerful methods are presented in the form of conversations examples and case studies The conversational style

is engaging and provides clarity

**The Right to Data Protection** Felix Bieker, 2022-05-06 This book advances an approach that combines the individual and the structural systemic dimensions of data protection It considers the right to data protection under the EU Charter and its relationship to the secondary legislation Furthermore the case law of the Court of Justice of the EU as well as current academic conceptualizations are analysed The author finds that current approaches invariably link data protection to privacy and often fail to address the structural implications of data processing He therefore suggests a dualistic approach to data protection in its individual dimension data protection aims to protect natural persons and their rights while the structural dimension protects the democratic society as a whole from the adverse effects of data processing Using this approach the full potential of an independent right to data protection can be realized Researchers practitioners and students will find this a valuable resource on the rationales scope and application of data protection Felix Bieker is Legal Researcher at the Office of the Data Protection Commissioner of Schleswig Holstein Unabh ngiges Landeszentrum f r Datenschutz in Kiel Germany
