**Parenting, Schooling and Children's Behaviour** Ann Buchanan, Barbara L. Hudson, 2018-08-17 Published in 1998 this book brings together some of the key findings in parenting and educational programmes from researchers at the University of Oxford working in primary health care educational studies clinical psychology and applied social studies At a time of considerable changes in family life and society in general there is concern that some children are not achieving their potential because of emotional and behavioural difficulties This book looks across the health education and social divide and highlights what we know and what we don't know about effective strategies in helping children and their parents overcome their difficulties Each chapter is written by a different member of the centre at Oxford for Research into Parenting and Children and is based on their research *Persons and family. **Sex and Friendship in Baboons** Barbara B. Smuts, 2017-09-29 Those who have been privileged to watch baboons long enough to know them as individuals and who have learned to interpret some of their more subtle interactions will attest that the rapid flow of baboon behavior can at times be overwhelming In fact some of the most sophisticated and influential observation methods for sampling vertebrate social behavior grew out of baboon studies invented by scientists who were trying to cope with the intricacies of baboon behavior Barbara Smuts eloquent study of baboons reveals a new depth to their behavior and extends the theories needed to account for it While adhering to the most scrupulous methodological strictures the author maintains an open research strategy respecting her subjects by approaching them with the open mind of an ethnographer and immersing herself in the complexities of baboon social life before formulating her research design allowing her to detect and document a new level of subtlety in their behavior At the Gilgil site described in this book she could stroll and sit within a few feet of her subjects By maintaining such proximity she was able to watch and listen to intimate exchanges within the troop she was able in other words to shift the baboons well along the continuum from subject to informant By doing so she has illuminated new networks of special relationships in baboons This empirical contribution accompanies theoretical insights that not only help to explain many of the inconsistencies of previous studies but also provide the foundation for a whole new dimension in the study of primate behavior analysis of the dynamics of long term intimate relationships and their evolutionary significance At every stage of research human observers have underestimated the baboon These intelligent curious emotional and long lived
