Assessment National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee to Review the Draft Fourth National Climate Assessment, 2018-05-18 Climate change poses many challenges that affect society and the natural world. With these challenges, however, come opportunities to respond. By taking steps to adapt to and mitigate climate change, the risks to society and the impacts of continued climate change can be lessened. The National Climate Assessment coordinated by the U.S. Global Change Research Program is a mandated report intended to inform response decisions. Required to be developed every four years, these reports provide the most comprehensive and up-to-date evaluation of climate change impacts available for the United States, making them a unique and important climate change document. The draft Fourth National Climate Assessment (NCA4) report reviewed here addresses a wide range of topics of high importance to the United States and society, more broadly extending from human health and community well-being to the built environment, to businesses and economies, to ecosystems and natural resources. This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate, whether it provides accurate information grounded in the scientific literature, and whether it effectively communicates climate science impacts and responses for general audiences, including the public, decision makers, and other stakeholders.

Industrial Engineering and Applications Loon-Ching Tang, 2023-08-15 The field of industrial engineering (IE) has a very wide scope, from production processes and automation to supply chain management, but the scope of IE techniques has expanded beyond the traditional domains of application and is now relevant to areas that matter most to society at large. This book presents the proceedings of ICIEA 2023, the 10th International Conference on Industrial Engineering and Applications, held in Phuket, Thailand, from 4 to 6 April 2023. The conference was conducted in hybrid mode, with close to 100 delegates attending in person and about 50 participants attending online. A total of 272 submissions were received for the conference, of which 120 were accepted for presentation, with 83 of those published here as full papers. These papers cover a wide range of topics within the scope of industrial and systems engineering, including but not limited to supply chain and logistics, quality and reliability, advanced manufacturing and production scheduling, ergonomics, and man-machine systems interfaces. In particular, a significant number of papers are devoted to machine learning techniques and applications beyond the traditional manufacturing sector, to include healthcare, sustainability assessment, and other social issues. Offering an overview of recent research and novel applications, the book will be of interest to all those whose work involves the application of industrial engineering techniques.
