Thought Experiments In Science And Philosophy:

Thought Experiments in Science and Philosophy Tamara Horowitz, Gerald J. Massey, 1991 Despite their centrality and importance to both science and philosophy relatively little has been written about thought experiments This volume brings together a series of extremely interesting studies of the history mechanics and applications of this important intellectual resource A distinguished list of philosophers and scientists consider the role of thought experiments in their various disciplines and argue that an examination of thought experimentation goes to the heart of both science and philosophy *Thought Experiments in Science, Philosophy, and the Arts* Melanie Frappier, Letitia Meynell, James Robert Brown, 2012-09-10 From Lucretius throwing a spear beyond the boundary of the universe to Einstein racing against a beam of light thought experiments stand as a fascinating challenge to the necessity of data in the empirical sciences Are these experiments conducted uniquely in our imagination simply rhetorical devices or communication tools or are they an essential part of scientific practice This volume surveys the current state of the debate and explores new avenues of research into the epistemology of thought experiments **Thought Experiments** Roy A. Sorensen, 1992 This text analyses a variety of thought experiments and explores what they are how they work and what their positive and negative aspects are It also sets the theory within an evolutionary framework of advances in experimental psychology [Thought Experiments in Philosophy, Science, and the Arts](#) Mélanie Frappier, Letitia Meynell, James Robert Brown, 2013 From Lucretius throwing a spear beyond the boundary of the universe to Einstein racing against a beam of light thought experiments stand as a fascinating challenge to the necessity of data in the empirical sciences Are these experiments conducted uniquely in our imagination simply rhetorical devices or communication tools or are they an essential part of scientific practice This volume surveys the current state of the debate and explores new avenues of research into the epistemology of thought experiments [Thought Experiments in Science, Philosophy, and the Arts](#) Melanie Frappier, Letitia Meynell, James Robert Brown, 2012-09-10 From Lucretius throwing a spear beyond the boundary of the universe to Einstein racing against a beam of light thought experiments stand as a fascinating challenge to the necessity of data in the empirical sciences Are these experiments conducted uniquely in our imagination simply rhetorical devices or communication tools or are they an essential part of scientific practice This volume surveys the current state of the debate and explores new avenues of research into the epistemology of thought experiments **The Laboratory of the Mind** James Robert Brown, 2005-09-26 An investigation into the philosophical implications of thought experiments in science Brown provides a fascinating account of some of the most influential thought experiments in the history of science [Thought Experiments, Science, and Theology](#) Yiftach Fehige, 2023-10-30 Did Adam have a navel Did Adam and Eve have sex Is God merely a fictional character like Superman Without thought experiments like these the field of science and religion would be severely impoverished Thought experiments are exercises of the imagination Like in many other disciplines the imagination has not received the attention it

deserves in theology This book argues that the imagination must be taken seriously as an engine for progress It offers a theology of the imagination that is consistent with and goes beyond existing discussions about pluralism at the intersection of science and religion

Thought Experiments Nenad Miscevic,2022 This book offers a readable introduction to the main aspects of thought experimenting in philosophy and science together with related imaginative activities in mathematics and linguistics It presents the main options in understanding thought experiments from empiricism to Platonism and discusses their strengths and weaknesses However it also provides some original perspectives on the topic Firstly it provides a new definition and analysis of thought experimenting that brings it closer to laboratory experimenting Secondly it develops the author s earlier theory of mental modelling proposed some decades ago by him and some other researchers in the field as the crucial procedure in thought experimenting The mental modelling approach links work with thought experimenting to cognitive science and to research on mental simulation which is a hot topic in present day research Thirdly it proposes a principled way to respond to criticism of thought experimenting by experimental philosophers as they have been dominating the present day debates The response suggests a possible ameliorative self help project for thought experimenting Finally the book provides a way to systematize the history of important thought experiments in science and philosophy and thus connects in an original way the systematic investigation of experimenting to the historical work of famous thought experiments It is of interest to scholars interested in history of ideas and philosophy of science

Thought Experiments in Methodological and Historical Contexts, 2011-06-09 During the last decades of the twentieth century highly imaginative thought experiments were introduced in philosophy Searle s Chinese room variations on the Brain in a vat Thomson s violinist At the same time historians of philosophy and science claimed the title of thought experiment for almost any argument Descartes evil genius Buridan s ass Gyges ring In the early 1990s a systematic debate began concerning the epistemological status of thought experiments The essays in this volume are an outcome of this debate They were guided by the idea that since we cannot forge a strict definition of thought experiments we should at least tame the contemporary wild usage of this notion by analysing thought experiments from various periods and thus clarify how they work what their limits are and what their conceptualisation could be Medieval and Early Modern Science 15

What If? Nicholas Rescher, Thought experimentation has been a staple of philosophical methodology since classical antiquity when Xenophanes of Colophon speculated that if horses had gods they would be equine in form Nicholas Rescher s What If undertakes a systematic survey of the role and utility of thought experiments in philosophy After surveying the historical

issues Rescher examines the principles involved and explains the conditions under which thought experimentation can validly yield instructive results in philosophy The reader gains understanding of the differences between scientific and philosophical experiments What If begins by examining the nature of thought experiments It presents an overview of how thought experiments have figured in natural science and in historical studies before moving on to examine how they function as an instrument of philosophical inquiry After examining thought experiments from the pre Socratics to the present day Rescher turns from history to analysis and examines the modes of reasoning involved in the use of speculative hypotheses in philosophical problem solving He shows the limitations of speculative ontology showing that thought experimentation can lead readily to paradox in a way that increasingly diminishes its usefulness The book concludes by arguing and illustrating how and when it becomes pointless to push speculation or thought experimentation beyond the limits of intelligibility and cogent sense Among the principal features of Rescher s book is its elaborate analysis of the appropriate conditions for philosophical thought experimentation Its cardinal thesis is that there indeed are limits to the appropriateness of this important methodological resource and that transgressing these limits destroys the prospect of drawing any valid lessons for the philosophical enterprise What If will be of interest to philosophers students of philosophy and theorists of logic and reasoning Nicholas Rescher is University Professor of Philosophy at the University of Pittsburgh He is the author of numerous philosophical works and holds six honorary degrees from universities on three continents He has served as a president of the American Philosophical Association the American Metaphysical Society and the American Catholic Philosophical Association
