Three Essays in International Taxation Sangwhan Lho,1996

Explaining Pakistan's Long-Run Growth Moazam Mahmood,Rabia Ikram,2025-05-14 This book explains the behaviour of output and its growth over time It does so by deliberating over a choice among three fundamental models the Samuelson Swan Solow neoclassical model the Harrod Domar model and the Keynesian model to choose one fit for purpose The criteria for goodness of fit are some mathematical properties of growth models The model chosen for meeting these properties is the Keynesian model which is a bit better on all these counts The chosen Keynesian model of aggregate demand has been used to explain the observed behaviour of Pakistan s long run growth of gross domestic product GDP Pakistan s GDP growth over the long run between 1973 and 2019 is marked by a statistically significant hiatus at approximately 1992 Pre 1992 GDP growth on trend approximated 6 percent per annum Post 1992 it drops on trend to approximately 4 percent per annum Applied to the hiatus in Pakistan s GDP growth after 1992 this model shows that pre 1992 high GDP growth is explained by high investment growth paired with a low marginal propensity to consume MPC while post 1992 lowered GDP growth is explained by lower investment growth paired with a higher MPC Thus Pakistan s higher GDP growth pre 1992 was investment led while its lower GDP growth post 1992 has been consumption led The book then traces the causality of these trends in investment and consumption to a falling trend in public investment This is linked to an increasingly austere regulatory policy environment while private investment fails to step in and maintain aggregate investment
