It is with great pleasure that we present the proceedings of the 4th International Symposium on Visual Computing ISVC 2008 in Las Vegas Nevada ISVC offers a common umbrella for the four main areas of visual computing including vision graphics visualization and virtual reality Its goal is to provide a forum for researchers scientists engineers and practitioners throughout the world to present their latest research findings ideas developments and applications in the broader area of visual computing This year ISVC grew significantly the program consisted of 15 oral sessions 1 poster session 8 special tracks and 6 keynote presentations The response to the call for papers was very strong we received over 340 submissions for the main symposium from which we accepted 102 papers for oral presentation and 70 papers for poster presentation Special track papers were solicited separately through the Organizing and Program Committees of each track A total of 56 papers were accepted for oral presentation and 8 papers for poster presentation in the special tracks All papers were reviewed with an emphasis on potential to contribute to the state of the art in the field Selection criteria included accuracy and originality of ideas clarity and significance of results and presentation quality The review process was quite rigorous involving two to three independent blind reviews followed by several days of discussion During the discussion period we tried to correct anomalies and errors that might have existed in the initial reviews **Advanced Topics in C** Noel Kalicharan, 2013-11-26 C is the most widely used programming language of all time It has been used to create almost every category of software imaginable and the list keeps growing every day Cutting edge applications such as Arduino embeddable and wearable computing are ready made for C Advanced Topics In C teaches concepts that any budding programmer should know You'll delve into topics such as sorting searching merging recursion random numbers and simulation among others You will increase the range of problems you can solve when you learn how to manipulate versatile and popular data structures such as binary trees and hash tables This book assumes you have a working knowledge of basic programming concepts such as variables constants assignment selection if else and looping while for It also assumes you are comfortable with writing functions and working with arrays If you study this book carefully and do the exercises

conscientiously you would become a better and more agile programmer more prepared to code today s applications such as the Internet of Things in C
