Open System Interconnection model (OSI model)

- OSI stands for **Open System Interconnection** is a reference model that describes how information from a software application in one computer moves through a physical medium to the software application in another computer.

- OSI consists of seven layers, and each layer performs a particular network function.

- OSI model was developed by the International Organization for Standardization (ISO) in 1984, and it is now considered as an architectural model for the inter-computer communications.

- OSI model divides the whole task into seven smaller and manageable tasks. Each layer is assigned a particular task.

- Each layer has a different but specific processing function
