This revised edition has more breadth and depth of coverage than the first edition. Information Technology: An Introduction for Today's Digital World introduces undergraduate students to a wide variety of concepts that they will encounter throughout their IT studies and careers. The features of this edition include: Introductory system administration coverage of Windows 10 and Linux Red Hat 7 both as general concepts and with specific hands-on instruction; Coverage of programming and shell scripting demonstrated through example code in several popular languages; Updated information on modern IT careers; Computer networks including more content on cloud computing; Improved coverage of computer security; Ancillary material that includes a lab manual for hands-on exercises. Suitable for any introductory IT course, this classroom-tested text presents many of the topics recommended by the ACM Special Interest Group on IT Education (SIGITE). It offers a far more detailed examination of the computer and IT fields than computer literacy texts focusing on concepts essential to all IT professionals, from system administration to scripting to computer organization. Four chapters are dedicated to the Windows and Linux operating systems so that students can gain hands-on experience with operating systems that they will deal with in the real world.

Microsoft Windows Server 2008 Barrie Sosinsky, Barrie A. Sosinsky, 2008-02-11. If you're preparing to move to Windows Server 2008, this book is for you. It bypasses common concepts you already know and concentrates on the essential information you need to migrate quickly and successfully. You'll get a thorough look at what's new in Windows Server 2008, including the redesigned architecture and improvements in features such as user services, graphics, virtualization, and the new TCP/IP protocol stack and boot environment. Covers everything from deployment to PowerShell to the latest security features, new performance monitoring, and remote access management.

Introduction to Server Administration Mark Lassoff, Stone eLearning, 2020. Are you a developer who wants to be able to deploy and manage your own servers? Perhaps you want to start working in server-side development and need to understand the back-end environment. Maybe you're interested in starting a career in server administration and want to understand the fundamentals. The fact is, if you're a web developer or web technologist, you need to understand server administration. After you complete this course, you will be able to independently provision your own web servers and deploy salable web applications that can be shared globally. You'll learn the tools of the trade used by server administrators and how to properly secure your web servers. This is a course about DOING, not simply watching an instructor. In the very first chapter, you'll hit the ground running as you create and configure your first server. During the course, you'll master command-line interface tools like NANO and VIM. You'll examine package managers and understand the LAMP stack. This course also prepares you to work with GIT code repositories and the popular MySQL database. You'll also learn the important server administration skills of working with security and logs. When you enroll in this class, you'll join a community of learners led by LearnToProgram's Henry Quinn. If you'd like to add server administration to your list of skills, we'll look forward to seeing you in class. Who is this course for? Web Designers and Developers who want to understand the server environment. People who want to learn DevOps Development Operations.
