## **Welcome Roberto:**

Welcome, Roberto! Mary Serfozo, 1969 Relates why Roberto always thinks each day in kindergarten is over too soon Illustrated with black and white photographs Programming Machine Learning Paolo Perrotta, 2020-03-31 You've decided to tackle machine learning because you're job hunting embarking on a new project or just think self-driving cars are cool But where to start It's easy to be intimidated even as a software developer The good news is that it doesn't have to be that hard Master machine learning by writing code one line at a time from simple learning programs all the way to a true deep learning system Tackle the hard topics by breaking them down so they're easier to understand and build your confidence by getting your hands dirty Peel away the obscurities of machine learning starting from scratch and going all the way to deep learning Machine learning can be intimidating with its reliance on math and algorithms that most programmers don't encounter in their regular work Take a hands-on approach writing the Python code yourself without any libraries to obscure what's really going on Iterate on your design and add layers of complexity as you go Build an image recognition application from scratch with supervised learning Predict the future with linear regression Dive into gradient descent a fundamental algorithm that drives most of machine learning Create perceptrons to classify data Build neural networks to tackle more complex and sophisticated data sets Train and refine those networks with backpropagation and batching Layer the neural networks eliminate overfitting and add convolution to transform your neural network into a true deep learning system Start from the beginning and code your way to machine learning mastery What You Need The examples in this book are written in Python but don't worry if you don't know this language you'll pick up all the Python you need very quickly Apart from that you'll only need your computer and your code adept brain Teaching Social Studies in the Early Childhood Classroom Jean Kirshner, Jenny Pettit, 2025-01-23 This textbook develops early childhood teachers' capacity to effectively instruct democratic principles to our youngest citizens As our world experiences political polarization pandemics heightened racial tension and the evolving awareness of gender and LGBTQ issues this textbook addresses those topics as they show up in the early childhood classroom offering research-informed practical guidance for pre- and in-service teachers The book is organized around 12 themes 10 of which are based on the National Council for Social Studies NCSS themes in addition to the anti-racist anti-bias curriculum and gender-expansive principals from the National Association for the Education of Young Children NAEYC closely following social studies content standards from across the United States The themes covered are culture and cultural diversity history geography identity gender roles and gender identity institutions power and authority economics science and technology global citizenship and civic ideals and practice Throughout each chapter you will come to know 5 early childhood classrooms and including profiles of the teachers students communities These five spaces represent a variety of early childhood teachers different age groups of students and diverse communities and show how the lesson learned in each chapter can be applied in classroom settings This book provides developmentally appropriate ways to teach
