Communications Infrastructure, Systems and Applications Rashid Mehmood, Eduardo Cerqueira, Radoslaw Piesiewicz, Imrich Chlamtac, 2009-12-18 The First International ICST Conference on Communications Infrastructure Systems and Applications in Europe EuropeComm 2009 was held August 11-13 2009 in London. EuropeComm 2009 brought together decision makers from the EU communication top researchers and industry executives to discuss the directions of communications research and development in Europe. The event also attracted academia and industry representatives as well as government officials to discuss the current developments and future trends in technology applications and services in the communications field. Organizing this conference was motivated by the fact that the development and deployment of future services will require a common global scale infrastructure and therefore it is important that designers and stakeholders from all the systems stacks come together to discuss these developments. Rapidly decreasing costs of computational power storage capacity and communication bandwidth have led to the development of a multitude of applications carrying an increasingly huge amount of traffic on the global networking infrastructure. What we have seen is an evolution: an infrastructure looking for networked applications has evolved into an infrastructure struggling to meet the social technological and business challenges posed by the plethora of bandwidth hungry emerging applications. **The SAGE Encyclopedia of Educational Technology** J. Electronic Design Automation Frameworks F. J. Rammig,Ron Waxman,1991 During the last decade the field of electronic design automation has changed from a small industry offering a random sampling of commercial and academic design automation tools to a significant industry comprising offerings ranging from individual tools to total design systems all based upon a set of emerging standards Workers in electronic design automation are active in the development of integrated design environments and therefore in the development of frameworks Frameworks for electronic design automation are rather similar to those for mechanical or software engineering however the class of tools may differ resulting in differing specific requirements for the services to be offered The present book documents the results of the 2nd Workshop on electronic design automation frameworks The question of standardization is of special interest within the book especially as related to VHDL EDIF PDES and CFI Also included are discussions of the role of specialized languages for specific environments and how the user community can help standards to evolve
