Environmental Archaeology: Meaning and Purpose

Umberto Albarella, 2013-04-17 Despite the fact that the human life of the past cannot be understood without taking into account its ecological relationships environmental studies are often marginalised in archaeology This is the first book that by discussing the meaning and purpose we give to the expression environmental archaeology investigates the reasons for such a problem This is achieved through the use of theoretical considerations and the aid of a number of case studies which by taking us from Anglo Saxon England to pre Columbian Venezuela and from Classical Greece to late Antique Egypt emphasise the potential of an integrated approach The book is written by archaeologists with different backgrounds and is addressed to all researchers who care about the past relationship between people and the rest of Nature Despite the complexity of some of the issues tackled the book is written in an accessible manner and should be of interest to all students who want to understand the essence of archaeology beyond the boundary of the individual sub disciplines

Environmental

Archaeology Elizabeth Reitz, Myra Shackley, 2012-06-05 One of the most significant developments in archaeology in recent years is the emergence of its environmental branch the study of humans interactions with their natural surroundings over long periods and of organic remains instead of the artifacts and household items generally associated with sites With the current attention paid to human responsibility for environmental change this innovative field is recognized by scientists conservation and heritage managers and policymakers worldwide In this context comes Environmental Archaeology by Elizabeth Reitz and Myra Shackley updating the seminal 1981 text Environmental Archaeology by Myra Shackley Rigorously detailed yet concise and accessible this volume surveys the complex and technical field of environmental archaeology for researchers interested in the causes consequences and potential future impact of environmental change and archaeology Its coverage acknowledges the multiple disciplines involved in the field expanding the possibilities for using environmental data from archaeological sites in enriching related disciplines and improving communication among them Introductory chapters explain the processes involved in the formation of sites introduce research designs and field methods and walk the reader through biological classifications before focusing on the various levels of biotic and abiotic materials found at sites including Sediments and soils Viruses bacteria archaea protists and fungi Bryophytes and vascular plants Wood charcoal stems leaves and roots Spores pollen and other microbotanical remains Arthropods molluscs echinoderms and vertebrates Stable isotopes elements and biomolecules The updated Environmental Archaeology is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites The updated Environmental Archaeology is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites

Case Studies in Environmental Archaeology Elizabeth Reitz, C. Margaret Scarry, Sylvia J. Scudder, 2007-12-03 A few years

ago one of us was approached by a student who asked if we really knew anything about human behavior from environmental archaeology This student was taking an environmental archaeology course in which taphonomy and the biases of the techniques and methods used by environmental archaeologists figured prominently The goal was to train students to be informed users of environmental data But the student quite rightly wanted to know if beyond taphonomy recovery biases and analytical biases there was anything environmental archaeologists could say about the human condition Her question was the stimulus for the first edition of this volume and continued to guide us as we edited this second edition Our purpose is to show students and scholars through a series of case studies that there are things environmental archaeologists do know about the human environmental relationship many of which defy conventional archaeological expectations To do so however we must break with the traditional organization of environmental archaeology along disciplinary lines Environmental archaeology is intrinsically interdisciplinary The demands of each discipline often mean however that specialists become further specialized in a very limited technical focus While almost every environmental technique and method is represented in this edition they are used as tools not as ends in themselves

Scudder,1996 This volume contains case studies in environmental archaeology that apply data obtained from various disciplines including zooarchaeology archaeobotany human biology and geoarchaeology to explore important anthropological issues Studies include geological and biological data from sites located in North America the Caribbean basin and South America Rather than critiquing or advocating specific environmental techniques each study demonstrates how and why the information obtained from their use is important to anthropologists and archaeologists

Environmental Archaeology Evangelia Pişkin, Arkadiusz Marciniak, Marta Bartkowiak,2018-04-11 This book aims to thoroughly discuss new directions of thinking in the arena of environmental archaeology and test them by presenting new practical applications Recent theoretical and epistemological advancement in the field of archaeology calls for a re definition of the subdiscipline of environmental archaeology and its position within the practise of archaeology New technological and methodological

discoveries in hard sciences and computer applications opened fresh ways for interdisciplinary collaborations thus introducing new branches and specialisations that need now to be accommodated and integrated within the previous status quo This edited volume will take the challenge and engage with contemporary international discussions about the role of the discipline within the general framework of archaeology By drawing upon these debates the contributors to this volume will rethink what environmental archaeology is and what kind of input the investigation of this kind of materiality has to the reconstruction of human history and sociality *Environmental Archaeology* Dena F.
