Physics Experiments Using PCs Hans-Martin Staudenmaier, 1993 Physics practical classes form an important part of many scientific and technical courses in higher education In addition to the older standard experiments such practicals now generally include a few computer controlled experiments developed in association with the research groups active in the particular university or college Since there is relatively little exchange of information between the teaching staff of different institutes the personal computer despite its ubiquity is underexploited in this role as a teaching aid The present book provides a detailed description of a number of computer controlled experiments suitable for practical classes Both the relevant physics and the computational techniques are presented in a form that enables the readers to construct and or perform the experiment themselves

Computer Applications in Physics Suresh Chandra, Mohit Kumar Sharma, 2014 Because of encouraging response for first two editions of the book and for taking into account valuable suggestion from teachers as well as students the text for Interpolation Differentiation Integration Roots of an Equation Solution of Simultaneous Equations Eigenvalues and Eigenvectors of Matrix Solution of Differential Equations Solution of Partial Differential Equations Monte Carlo Method and Simulation Computation of some Functions is improved throughout and presented in a more systematic manner by using simple language These techniques have vast applications in Science Engineering and Technology The C language is becoming popular in universities colleges and engineering institutions Besides the C language programs are written in FORTRAN and BASIC languages Consequently this book has rather wide scope for its use Each of the topics are developed in a systematic manner thus making this book useful for graduate postgraduate and engineering students
