This comprehensive text contains chapters spanning every major life cycle phase from preconception and pregnancy through older adulthood. It covers optimal growth and development, health promotion and prevention, public health nutrition issues, social determinants of health, and examples of evidence-based public health nutrition programs and policies in the United States and around the globe. Major public health nutrition themes found in life cycle phases are discussed, including food security, life stage issues in vulnerable populations, maternal and child health, childhood obesity, chronic disease prevention, optimal aging, public health nutrition emergency management issues related to health communication and health education, as well as economic impacts of poor public health nutrition. With a strong emphasis on evidence-based practice and cultural competencies and featuring case studies, discussion questions, and learning activities in each chapter, Life Cycle Nutrition for Public Health Professionals is a unique, engaging, and essential resource.
