Judgement Freerk A. Lootsma, 2007-08-23 The point of departure in the present book is that the decision makers involved in the evaluation of alternatives under conflicting criteria express their preferential judgement by estimating ratios of subjective values or differences of the corresponding logarithms the so called grades Three MCDA methods are studied in detail the Simple Multi Attribute Rating Technique SMART as well as the Additive and the Multiplicative AHP both pairwise comparison methods which do not suffer from the well known shortcomings of the original Analytic Hierarchy Process Context related preference modelling on the basis of psycho physical research in visual perception and motor skills is extensively discussed in the introductory chapters Thereafter many extensions of the ideas are presented via case studies in university administration health care environmental assessment budget allocation and energy planning at the national and the European level The issues under consideration are group decision making with inhomogeneous power distributions the search for a compromise solution resource allocation and fair distributions scenario analysis in long term planning conflict analysis via the pairwise comparison of concessions and multi objective optimization The final chapters are devoted to the fortunes of MCDA in the hands of its designers The research started in the late seventies when I got involved in three different problems the nomination procedures in a university the evaluation of alternative energy research proposals and the evaluation of non linear programming software Organized Crime and Banking United States. Sucar, Francisco J. Cantu, 2006-12-30 Fifty years ago A Turing predicted that by 2000 we would have a machine that could pass the Turing test Although this may not yet be true AI has advanced significantly in these 50 years and at the dawn of the XXI century is still an active and challenging field This year is also significant for AI in Mexico with the merging of the two major AI conferences into the biennial Mexican International Conference on Artificial Intelligence MICAI series MICAI is the union of the Mexican National AI Conference RNIA and the International AI Symposium ISAI organized

annually by the Mexican Society for AI SMIA since 1984 and by the Monterrey Institute of Technology ITESM since 1988 respectively. The first Mexican International Conference on Artificial Intelligence MICAI 2000 took place April 11-14, 2000 in the city of Acapulco, Mexico. This conference seeks to promote research in AI and cooperation among Mexican researchers and their peers worldwide. We welcome you all. Over 163 papers from 17 different countries were submitted for consideration to MICAI 2000. After reviewing them thoroughly, MICAI's program committee referees and program chair accepted 60 papers for the international track. This volume contains the written version of the papers and invited talks presented at MICAI. We would like to acknowledge the support of the American Association for Artificial Intelligence AAAI and the International Joint Conference on Artificial Intelligence IJCAI. We are specially grateful for the warm hospitality and generosity offered by the Acapulco Institute of Technology.

Cyber-Risk Management Atle Refsdal, Bjørnar Solhaug, Ketil Stølen, 2015-10-01. This book provides a brief and general introduction to cybersecurity and cyber risk assessment. Not limited to a specific approach or technique, its focus is highly pragmatic and is based on established international standards including ISO 31000 as well as industrial best practices. It explains how cyber risk assessment should be conducted, which techniques should be used, when, what the typical challenges and problems are, and how they should be addressed. The content is divided into three parts. First, part I provides a conceptual introduction to the topic of risk management in general and to cybersecurity and cyber risk management in particular. Next, part II presents the main stages of cyber risk assessment from context establishment to risk treatment and acceptance, each illustrated by a running example. Finally, part III details four important challenges and how to reasonably deal with them in practice: risk measurement, risk scales, uncertainty, and low frequency risks with high consequence. The target audience is mainly practitioners and students who are interested in the fundamentals and basic principles and techniques of security risk assessment, as well as lecturers seeking teaching material. The book provides an overview of the cyber risk assessment process, the tasks involved, and how to complete them in practice.
