and systema Traditional techniques are fast becoming obsolete due to unique requirements such as limited controllability
and observability increasing execution complexity for test vector generation and high cost of fault simulation to mention just
a few New approaches are imperative to achieve the highly sought goal of the three months turn around cycle time for a
state of the art computer chip The importance of testing and diagnostic processes is of primary importance if costs must be
kept at acceptable levels The objective of this NATO ASI was to present analyze and discuss the various facets of testing and
diagnosis with respect to both theory and practice The contents of this volume reflect the diversity of approaches currently
available to reduce test and diagnosis time These approaches are described in a concise yet clear way by renowned experts
