Sorting A Distribution Theory:

Sorting Hosam M. Mahmoud, 2011-10-14 A cutting edge look at the emerging distributional theory of sorting Research on distributions associated with sorting algorithms has grown dramatically over the last few decades spawning many exact and limiting distributions of complexity measures for many sorting algorithms Yet much of this information has been scattered in disparate and highly specialized sources throughout the literature In *Sorting A Distribution Theory* leading authority Hosam Mahmoud compiles consolidates and clarifies the large volume of available research providing a much needed comprehensive treatment of the entire emerging distributional theory of sorting Mahmoud carefully constructs a logical framework for the analysis of all standard sorting algorithms focusing on the development of the probability distributions associated with the algorithms as well as other issues in probability theory such as measures of concentration and rates of convergence With an emphasis on narrative rather than technical explanations this exceptionally well written book makes new results easily accessible to a broad spectrum of readers including computer professionals scientists mathematicians and engineers *Sorting A Distribution Theory* Contains introductory material on complete and partial sorting Explains insertion sort quick sort and merge sort among other methods Offers verbal descriptions of the mechanics of the algorithms as well as the necessary code Illustrates the distribution theory of sorting using a broad array of both classical and modern techniques Features a variety of end of chapter exercises

experimental analysis or in the implementation testing and evaluation of algorithms for realistic environments and scenarios The paper presentations address specific applied areas that present unique challenges in their underlying algorithmic problems as well as methodological issues and standards in the context of empirical research on algorithms and data structures analysis of algorithms and associated combinatorial structures The papers study properties of fundamental combinatorial structures that arise in practical computational applications such as permutations trees strings tries and graphs and address the precise analysis of algorithms for processing such structures including average case analysis analysis of moments extrema and distributions and probabilistic analysis of randomized algorithms This proceedings collects extended versions of the 14 papers that were selected for presentation from the ALENEX workshop and 10 papers selected for presentation from the ANALCO workshop
