Solutions Manual for Signal Detection and Estimation Mourad Barkat,1991 Signal Detection and Estimation Mourad Barkat,2005 This newly revised edition of a classic Artech House book provides you with a comprehensive and current understanding of signal detection and estimation Featuring a wealth of new and expanded material the second edition introduces the concepts of adaptive CFAR detection and distributed CA CFAR detection The book provides complete explanations of the mathematics you need to fully master the material including probability theory distributions and random processes **Detection Estimation and Modulation Theory, Part I** Harry L. Van Trees,Kristine L. Bell,2013-04-15 Originally published in 1968 Harry Van Trees s Detection Estimation and Modulation Theory Part I is one of the great time tested classics in the field of signal processing Highly readable and practically organized it is as imperative today for professionals researchers and students in optimum signal processing as it was over thirty years ago The second edition is a thorough revision and expansion almost doubling the size of the first edition and accounting for the new developments thus making it again the most comprehensive and up to date treatment of the subject With a wide range of applications such as radar sonar communications seismology biomedical engineering and radar astronomy among others the important field of detection and estimation has rarely been given such expert treatment as it is here Each chapter includes section summaries realistic examples and a large number of challenging problems that provide excellent study material This volume which is Part I of a set of four volumes is the most important and widely used textbook and professional reference in the field

As a discipline signal detection has evolved significantly over the last 40 years Some changes have been caused by technical advances like the development of robust detection methods or the use of the theory of large deviations to characterize the asymptotic performance of tests but most changes have been caused by transformations in the engineering systems to which detection techniques are applied While early applications of signal detection focused on radar and sonar signal processing or the design of digital communication receivers newer areas of application include image analysis and interpretation document

authentication biometrics and sensor or actuator failure detection This expanded scope of application has required some adjustment in standard ways of formulating detection problems For example image processing applications typically combine parameter estimation and detection tasks so the separation of parameter estimation and detection in distinct operations typical of early communication systems where parameter estimation was accomplished through the use of training signals needs to be abandoned Other changes have occurred in the design of communication systems which make it increasingly difficult to treat the detection of communications signals and of radar sonar signals in a unified manner This common framework assumes implicitly that intersymbol interference is not present and that channel coding and modulation are implemented separately since in this case modulated signals can be detected one symbol at a time But modern communication systems are typically designed to operate over bandlimited channels where intersymbol interference is present and starting with the introduction of trellis coded modulation modulation and coding have become intertwined
