Some Trees:

Some Trees John Ashbery, 2014-09-09 John Ashbery's first published book of poems handpicked from the slush pile by none other than W H Auden. Ashbery's *Some Trees* narrowly beat out a manuscript by fellow New York poet Frank O'Hara to win the renowned Yale Series of Younger Poets prize in 1955 after the book had been rejected in an early screening round. Competition judge W H Auden was perhaps the first to note in his original preface to *Some Trees* the meditative polyphony that decades of readers have come to identify as Ashbery's unique style. If he is to be true to nature in this world he must accept strange juxtapositions of imagery singular associations of ideas. But not all is strange and associative here. *Some Trees* includes *The Instruction Manual* one of Ashbery's most conversational and perhaps most quoted poems as well as a number of poems that display his casually masterful handling of such traditional forms as the sonnet the pantoum the Italian canzone and even with *The Painter* the odd tricky sestina. *Some Trees* an essential collection for Ashbery scholars and newbies alike introduced one of postwar America's most enduring and provocative poetic voices by turns conversational discordant haunting and wise.

Some Stock and Scion Observations on Apple Trees Ray Harland Roberts, 1929 [Trees of the Brain, Roots of the Mind](#) Giorgio A. Ascoli, 2015-04-10 An examination of the stunning beauty of the brain's cellular form with many color illustrations and a provocative claim about the mind-brain relationship. The human brain is often described as the most complex object in the universe. Tens of billions of nerve cells tiny tree-like structures make up a massive network with enormous computational power. In this book Giorgio Ascoli reveals another aspect of the human brain the stunning beauty of its cellular form. Doing so he makes a provocative claim about the mind-brain relationship. If each nerve cell enlarged a thousandfold looks like a tree then a small region of the nervous system at the same magnified scale resembles a gigantic fantastic forest. This structural majesty illustrated throughout the book with extraordinary color images hides the secrets behind the genesis of our mental states. Ascoli proposes that some of the most intriguing mysteries of the mind can be solved using the basic architectural principles of the brain. After an overview of the scientific and philosophical foundations of his argument Ascoli links mental states with patterns of electrical activity in nerve cells presents an emerging minority opinion of how the brain learns from experience and unveils a radically new hypothesis of the mechanism determining what is learned what isn't and why. Finally considering these notions in the context of the cosmic diversity within and among brains Ascoli offers a new perspective on the roots of individuality and humanity.

Why Trees? Martin R. Ford, 2024-08-29 Trees are both amazing and vital.
