Stochastic Approximation and Recursive Algorithms and Applications Harold Kushner,G. George Yin,2006-05-04 The basic stochastic approximation algorithms introduced by Robbins and MonroandbyKieferandWolfowitzintheearly1950shavebeenthesubject of an enormous literature both theoretical and applied This is due to the large number of applications and the interesting theoretical issues in the analysis of dynamically de ned stochastic processes The basic paradigm is a stochastic di erence equation such as Y where takes n 1 n n n n its values in some Euclidean space Y is a random variable and the step n size 0 is small and might go to zero as n In its simplest form n is a parameter of a system and the random vector Y is a function of n noise corrupted observations taken on the system when the parameter is set to One recursively adjusts the parameter so that some goal is met n asymptotically Thisbookisconcernedwiththequalitativeandasymptotic properties of such recursive algorithms in the diverse forms in which they arise in applications There are analogous continuous time algorithms but the conditions and proofs are generally very close to those for the discrete time case The original work was motivated by the problem of nding a root of a continuous function g where the function is not known but the perimenter is able to take noisy measurements at any desired value of Recursive methods for root nding are common in classical numerical analysis and it is reasonable to expect that appropriate stochastic analogs would also perform well   Stochastic Approximation and Optimization of Random Systems L. Nevel'son,R. Z. Has'minskii,1976-10-01 This book is devoted to sequential methods of solving a class of problems to which belongs for example the problem of finding a maximum point of a function if each measured value of this function contains a random error Some basic procedures of stochastic approximation are investigated from a single point of view namely the theory of Markov processes and martingales Examples are considered of applications of the theorems to some problems of estimation theory educational theory and
