Barley,2020-10-27 In recent years a growing number of commentators have declared that we are at the beginning of a technical revolution that will see profound changes in the way we live and work Yet what constitutes a technological revolution and what logic supports how successive technological revolutions have unfolded in Western societies How do technologies change organizations and what are the implications of intelligent technologies for work and employment Here Stephen R Barley reflects on over three decades of research to explore both the history of technological change and the approaches used to investigate how technologies are shaping our work and organizations He begins by placing current developments in artificial intelligence into the historical context of previous technological revolutions drawing on William Faunce s argument that the history of technology is one of progressive automation of the four components of any production system energy transformation transfer and control technologies He then considers how technologies change work and when those changes will and will not result in organizational change In doing so he lays out a role based theory of how technologies produce changes in organizations He then tackles the issue alongside Matt Beane of how to conceptualize a more thorough approach to assessing how intelligent technologies such as artificial intelligence can shape work and employment They identify the main reasons why the current state of research on intelligent technologies in the workplace is inadequate and provide pointers on how empirical studies in this area may and must be improved He concludes with a
