Rojek,1999-10-28 This is the latest book on leisure from one of the leading figures in the field of leisure studies It makes a major contribution in considering leisure as a primary aspect of cultural life Rojek treats modern culture as performative That is there are strong pressures on us to keep busy even if we are busy doing nothing Leisure is analysed as a status placing activity The implications of the post work thesis for leisure the role of inequality in leisure practice are explored in interesting and novel ways Perhaps the most notable feature of the book is the discussion of the abnormal forms of leisure and the attack on the medicalized model of society This book will be required reading for anyone interested in leisure studies and cultural studies The California Immigration and Housing Bulletin ,1920 **Dogmatics II** Emil Brunner,2025-04-24

Horror Culture in the New Millennium Daniel W. Powell, 2018-11-23 Horror Culture in the New Millennium: Digital Dissonance and Technohorror explores the myriad ways in which technology is altering the human experience as articulated in horrific storytelling. The text surveys a variety of emerging trends and story forms in the field through both a series of critical essays and personal interviews with scholars, editors, authors, and artists now creating and refining horror stories in the new millennium. The project posits a rationale for the presence of technohorror as a defining concern in contemporary horror literature, marking a departure from the monstrous and spectral traditions of the twentieth century in its depictions of frightful narratives marked by the qualities of plausibility, mundanity, and surprise as we tell stories about what it means to be human. As our culture explores the dichotomies of the born-made, natural/artificial and human/computer, all while subsumed within a paradigm shift predicated on the transition from the traditions of print to emerging digital communications practices, these changes form the basis for horrific speculations in our texts and technologies. Ultimately, Digital Dissonance: Horror Culture in the New Millennium explores that paradoxical human attraction for peering into the darkness as translated through our lived experiences in an era of rapidly evolving technologies.

New Essays on the Frankfurt School of Critical Theory Alfred J. Drake, 2009 New Essays on the Frankfurt School of Critical Theory offers fifteen essays covering a variety of authors and topics related to the Frankfurt School of Critical Theory. Institut für Sozialforschung that flourished from the 1920s in connection with the University of Frankfurt in Germany and then abroad. The volume offers reflections on the Frankfurt School's critical dialogue with philosophical predecessors such as Marx and Nietzsche, elucidates key debates between Frankfurt School authors and contemporaries, and addresses the continuing significance of the Frankfurt School in the postmodern age with reference to major thinkers such as Fredric Jameson, Antonio Negri, Gilles Deleuze, and Jacques Lacan. Readers will find a lively but respectful debate on the strengths and limitations of Frankfurt notions about technology, negative dialectics, the Shoah, and the utopian dimension of political thought among other concerns. The aim of contributors throughout has been to broaden readers' understanding of the sophistication and integrity of Frankfurt School thought rather than reducing it to the level of the formulaic or polemical. Music theory, the representation of urban spaces in prose and image, and the

theorization of childhood find a place in this appropriately diverse collection with essays on Lewis Mumford and Siegfried Kracauer broadening its scope

From Stars to Brains: Milestones in the Planetary Evolution of Life and Intelligence Andrew Y. Glikson, 2019-02-18 The permutation of basic atoms nitrogen hydrogen oxygen carbon and phosphorus into the biomolecules DNA and RNA subsequently evolved in cells and brains defining the origin of life and intelligence remains unexplained Equally the origin of the genetic information and the intertwined nature of hardware and software involved in the evolution of bio molecules and the cells are shrouded in mystery This treatise aims at exploring individual and swarm behaviour patterns which potentially hint at as yet unknown biological principles It reviews theories of evolution with perspectives from the earth sciences commencing with the earliest observed records of life This is followed by reviews and discussion of the building blocks of life marine and terrestrial communities the arthropods birds and finally humans It is suggested that further to the mutation natural selection processes established by Darwin and Wallace an understanding of the evolution of intelligence remains little understood A directionality of evolutionary trajectories is evident not least the purposeful thinking process of humans as well as animals It is not clear how directional intelligence manifested for example by the collective intelligence of arthropod colonies has evolved from mutation natural selection processes Potential clues for the understanding of life and evolution are provided by Aristotle s dictum of the whole being greater than the sum of the parts Niels Bohr s principle of quantum complementarity and George Ellis theory of top down causality Inherent in the question of the origin of life is an anthropocentric bias related to the self referential Anthropic Principle and theological paradigms of man s supposed dominion over all other species The Anthropic Principle however should be capable of being circumvented using the scientific falsification method assuming universal verified constants of physics The phenomenon of the human mastery of fire and the splitting of the atom leading to the seventh major mass extinction of species remains incomprehensible

Lewis Mumford Thomas Parke Hughes, Agatha C. Hughes, 1990 This collection of essays by leading scholars explores the numerous and brilliant facets of Lewis Mumford s insights into technology and modern culture Characterized as one of the last of the American public intellectuals Mumford has written extensively about those issues and problems that are most challenging and troubling for modern society His *Technics and Civilization* 1934 and the two volume *The Myth of the Machine* 1967 and 1970 still provide an agenda for discussion of technology and culture Mumford foresightedly warned against simplistic technological determinism by exploring the ways in which values shape technology He is generally recognized as a seminal figure who laid the foundations for the fields of American Studies and the History of Technology This compelling portrait of Mumford written in an accessible style and exploring highly controversial timely issues makes a substantial contribution to the rapidly growing interest in the interaction of technology and culture and is must reading for students of the history and sociology of science and technology American studies and American intellectual and cultural history
