Star Winds:

Instability and Variability of Hot-Star Winds Anthony F.J. Moffat, Stanley P. Owocki, Alex W. Fullerton, Nicole St-Louis, 2012-12-06 This specialized workshop was conceived during the workshop on Non isotropic and Variable Outflows from Stars which was held at the Space Telescope Science Institute in October 1991 At that meeting the four of us collectively decided that the time was ripe for an even more focussed discussion of the basic issues in the area of hot star wind instability and its observable manifestations Not that the big problems have been solved Rather we are currently in a phase of rapid development both with regard to the models and to the observations The key issue at this new workshop would be to decide how the time dependent structures observed in hot star winds e g NACs DACs blobs clumps filaments shells puffs jets etc relate to radiative and other instabilities Further questions concern the role of turbulence and the nature of its driver and the effect of stellar rotation pulsation and magnetic fields on time dependent phenomena in hot star winds Of no less importance is the impact of stellar wind variability on the derivation of mass loss rates on stellar evolution and on momentum energy deposition in the interstellar medium To attain our goal of maximum confrontation in the positive sense we decided 1 to limit the workshop to the observers and theoreticians most active in this field in the world 2 to insist that virtually all participants present a talk thereby avoiding the distraction of poster sessions and 3 to allocate approximately half of the allotted time to discussion

Stalio,L.A. Willson,1988-07-31 Stellar mass loss is an essential part of the cycling of material from the interstellar medium into stars and back and must be understood if we are to model processes on galactic to cosmological scales The study of stellar winds and the effects of stellar mass loss has reached a particularly exciting stage where observational capabilities are increasingly able to provide interesting constraints on models and theories Recent results from theoretical and observational work for both hot and cool stars with substantial winds have led to the suggestion that a combination of pulsation with other mechanisms makes for particularly efficient mass loss from stars This provided the original motivation for the organization of this workshop The conference was organized along relatively conventional lines according to the types of objects being scrutinized However the true unity of the proceedings comes from the interplay of the mechanisms involved For example for the cool luminous Mira variables pulsation leads to shock waves that extend the atmosphere enhancing dust formation radiation pressure on dust drives the wind cooling the atmosphere and in some cases suppressing the shocks Similarly for the Be stars both pulsation in this case non radial and radiation pressure due to UV resonance lines are expected to be important and this expectation is at least qualitatively borne out by the observations *Mission Stories of Many Lands* ,1894 *The Missionary Herald at Home and Abroad* ,1885 The Missionary Herald ,1885 Vols for 1828 1934 contain the Proceedings at large of the American Board of Commissioners for Foreign Missions
