ABSTRACT

Workplace learning is always embedded in a context. The purpose of this study is to compare the characteristics of workplace learning in the market, public and civil sectors with the tool of literature review, and to identify the most important contextual factors for learning practice and effectiveness. The article thus contributes to the scientific discourse in the field of knowledge management and workplace learning research. In the following study, drawing upon classic literature and current empirical research findings, the characteristics of workplace learning in various sectors are first outlined along the themes of knowledge management, knowledge sharing, innovation, organizational learning, the purpose of learning, and the most significant knowledge elements. Subsequently, the main differences are summarized. Finally, factors for the analysis of comparative research on workplace learning are proposed, spanning individual, individual and organizational, organizational, and organizational and system levels.

THE CONTEXT OF WORKPLACE LEARNING

How does the sector of work determine individual on-the-job learning? What new trends and challenges are emerging in the labour market? Workplace learning is always embedded in a context. After the personal level of the individual, the next contextual level is typically the level of the organization, the sector, the sectoral environment, and the system, although additional intermediate levels can also be named (e.g., professional group, team, etc.). Although the effects of each level cannot be completely separated from each other, it is important to understand these environments in order to effectively develop workplace learning.

This study scrutinizes the level of the sector, a term that has a double meaning, as it is used in everyday discourse to demarcate the for-profit, non-profit, and public service spheres, and on the other hand, it is also an accepted term when distinguishing between different industries. In this study, we reserve the term sector to describe the three areas of the market, public service, and the civil sphere. It is important to emphasize that the market sectors and economic sectors form a complex system. It cannot be said that one includes the other or vice versa; the two approaches are subsets. As an example, we can cite a school, which can be state-, foundation-, or private-owned, but companies can also be owned by the state, or we can come across a social enterprise that is owned by a foundation.

The purpose of this study is to present the aspects of the sectoral context and identify its most important dimensions, which the profession and the research behind the study can rely on during the comparative analysis of learning taking place in different work areas. In line with this goal, the narrative approach was used as the methodology of the literature review. We employed a thoughtful and flexible approach, despite not following a formal systematic review methodology. Our criteria emphasized the direct relevance of articles to our research objective, publication quality, temporal considerations, methodological diversity, balance of perspectives, avoidance of redundancy, and adaptability. We aimed to provide readers with a comprehensive understanding of the research topic by including a range of articles, from seminal works to recent contributions, while ensuring credibility and diversity.

Informal and Incidental Learning in the Workplace (Routledge Revivals) Victoria J. Marsick, Karen Watkins, 2015-06-11 Today rapid change is a constant challenge in the workplace and thousands of individuals need to be involved in continuous learning. Traditional training approaches however do not emphasise informal and incidental learning. Furthermore since informal learning is seldom designed learning outside of a structured experience may lead to mistaken or dysfunctional learning. Strategies for improving informal learning are urgently needed. This book first published in 1990 responds to this need by taking a challenging look at many assumptions about workplace learning outside of the classroom and by proposing methods to improve it. They develop a theory of informal and incidental workplace learning based on current developments in training and human resource development which they illustrate with readable and illuminating case studies which tell vivid stories of adult education and human resource development practice. *Informal and Incidental Learning in the Workplace* is essential reading for researchers and practitioners of human resource development and also for students of education and adult learning.

Organizational Knowledge Silvia Gherardi, 2009-02-04 This book makes an important contribution to our understanding of practice based organizational learning and knowing. Based on the author's detailed study of safety practices in different corporate settings. The author uses this study to empirically describe how learning, knowing and organizing are practised. Centred on the concepts of knowing in practice and the texture of organizational knowledge. Gives a rich account of how organizations learn and how corporate practices and policies evolve. *Technology-Enhanced Professional Learning*

Allison Littlejohn, Anoush Margaryan, 2013-10-30 *Technology Enhanced Professional Learning* addresses the need for continuous workplace learning that derives from the emergence of new specialized and constantly changing work practices. While continuous learning is fundamental to enabling individuals to function in and productively shape contemporary workplaces digital technology is increasingly central to productive workplace practice. By examining the intersection of human learning processes, emergent work practices and patterns of use of digital technology to support learning and work this edited collection brings the disparate fields of professional learning and technology enhanced learning together to advance theory and practice in both realms.

Work-Related Learning Jan N. Streumer, 2006-03-14 Work related learning can be broadly seen to be concerned with all forms of education and training closely related to the daily work of new employees and is increasingly playing a central role in the lives of individuals, groups or teams and the agendas of organizations. However as this area of study becomes more prominent debates have opened about the nature of the field as well as about its configurations and effects. For example some authors have a broad definition of WRL and define it as learning for work at work and through work ranging from formal through semi structured to informal learning. Others prefer to use the concept of WRL mainly in connection to informal incidental learning processes during work leading to competent workplace learners. Formal and informal learning are distinguished from each other with respect to the level of intention.

implicit non intentional incidental versus deliberative intentional structured Another point of discussion originates from the different theoretical backgrounds of the authors the learning theorists versus the organizational theorists The first group is mainly interested in the question of how learning comes about the second group is predominantly interested in the search for factors affecting learning
