The Product is Docs Christopher Gales, Splunk, Inc, 2020 This book provides a broad perspective about the essential aspects of creating technical documentation in today's product development world It is a book of opinions and guidance collected as short essays You can read selectively about subjects that interest you or you can read the entire collection in any order you like Information development is a multidimensional discipline and it is easy to theorize We have written this book from our direct experience using the concrete insights and practices we apply to our work every day If you work as an information developer a manager in a documentation team or in another part of product development that collaborates with a doc team there is information in this book for you Perhaps you are a technical writer in a small high growth company that is figuring out its processes Perhaps you are an information development manager in a large enterprise company with an expanding product line and an ever more complex matrix of cross functional dependencies You might work at a medium sized company where your management is asking you to do more with fewer people and you want some additional perspective that will help you find a leaner and more effective way to deliver what your business demands Or you might work outside the technical documentation world in another part of product development and are wondering how to collaborate most effectively with the documentation team The purpose of The Product is Docs is to provoke discussion shine light on some murky areas and we hope inspire our colleagues to consider their processes and assumptions with new eyes Amazon

Technical Documentation Best Practices - Planning and Structuring Helpful User Assistance Marc Achtegig, 2020-10-25 Even the best information is worthless if users can't find it Providing user friendly structure and navigation is just as important as providing well written content However structuring user assistance isn't as simple and obvious as it may seem If you think that your document structure should follow the structure of your product's components and functions You're wrong If you think that the type of document that you prefer is the same type of document that your clients prefer You're wrong If you think that all the information that you have is important You're also wrong This book tells you how to structure index and link your documents so that readers actually find the information they need

Topics covered General structuring principles that all structural decisions have in common Choosing media Should you provide a printed or printable user manual PDF online help or both What information should go into the user manual and what information should go into online help Which help format should you use Can context sensitive help calls be implemented Should you provide interactive features Planning documents Should you put all information into one document or should you supply several user manuals for specific purposes and user groups How should you name your documents Planning document sections What are the major sections that your documents should consist of Are there any standard sections that you mustn't forget Planning topics What types of information do your clients need How should you build and name the individual topics within the document Planning the order of sections and topics How should you organize the sections and topics within your documents What comes first What comes later Planning navigation Which navigational devices should you provide in printed documents and in online help systems Where should you provide links or cross references and where not

Quality of Technical Documentation Michaël Steehouder, 1994 User manuals reference guides project documentation equipment specifications and other technical documents are increasingly subjected to high quality standards However it is not clear whether research efforts are keeping pace with this increasing importance of

documentation quality This volume includes studies from researchers as well as practitioners exemplifying three approaches towards document quality Product orientation with an eye for usability in various manifestations such as tutorials concept definitions tools for users of documentation to find information methods of eliciting user feedback and cultural differences Process orientation in which the quality of technical documentation is regarded as an outgrowth of a process involving sub steps such as storyboarding pre testing and use of automation tools in writing and producing documents Professional orientation in which attention is focused on those who create technical documentation The volume will be of interest to a broad audience of writers managers and trainers with technical and non technical backgrounds such as quality managers communication managers technical communicators trainers in computer usage teachers researchers and students of technical communication

Integrated Management of Technical Documentation Jirka Hoppe, 2012-12-06 Writing documentation is an integral part of any technical product development A significant amount of time is spent describing the product functionality giving insights into technical details providing maintenance instructions specifying marketing information writing user manuals etc As the creation of such documentation is generally a source of higher production costs many large companies are realising the need to increase the efficiency of documentation handling Simple documents consisting of only a few pages can be developed on simple systems Basic components of such systems are an editor handling text and graphics file storage and a printer Such configurations however are not sufficient to handle professional documentation as produced by larger companies Detailed studies of technical documentation requirements have revealed that in particular the following functionality is not usually provided by such simple documentation systems Technical documentation is often very large documents having hundreds or even thousands of pages are not exceptional Due to size and complexity technical documentation is developed most often by a team of authors A system for technical documentation has to provide functionality supporting the organisation of a group of authors Technical documentation usually consists of many different documents combined into one large documentation for a particular product The optimum organisation of the storage and retrieval of documents is crucial for the performance and acceptability of the system The functionality offered by normal file systems is not adequate to organise complex systems
