Transforms and Fast Algorithms for Signal Analysis and Representations Guoan Bi, Yonghong Zeng, 2012-12-06 that is what learning is You suddenly understand something you've understood all your life but in a new way Various transforms have been widely used in diverse applications of science engineering and technology New transforms are emerging to solve many problems which may have been left unsolved in the past or newly created by modern science or technologies Various methods have been continuously reported to improve the implementation of these transforms Early developments of fast algorithms for discrete transforms have significantly stimulated the advance of digital signal processing technologies More than 40 years after fast Fourier transform algorithms became known several discrete transforms including the discrete Hartley transform and discrete cosine transform were proposed and widely used for numerous applications Although they all are related to the discrete Fourier transform different fast algorithms and their implementations have to be separately developed to minimize computational complexity and implementation costs In spite of

the tremendous increase in the speed of computers or processors the demands for higher processing throughout seemingly never ends Fast algorithms have become more important than ever for modern applications to become a reality Many new algorithms recently reported in the literature have led to important improvements upon a number of issues which will be addressed in this book Some discrete transforms are not suitable for signals that have time varying frequency components Although several approaches are available for such applications various inherent problems still remain unsolved

New Approaches to Identifying Structures Using Geometric Structure Analysis: Design and Adaptation Karabutov, Nikolay Nikolayevich, 2025-09-10 An actual problem of identification theory is considered related to the non formalized task of evaluating the model structure Novel approaches to structural identification SI propose solutions to various problems of identification theory based on the analysis of geometric frameworks GFs This formalized approach to the structural identifiability SID for nonlinear dynamical systems of various classes shows that structural identifiability follows from SI Additionally based on the GF estimates for the Lyapunov exponents LEs of dynamical systems are shown to be recoverable detectable and identifiable When combined with synthesized methods and algorithms they can be applied to the construction of mathematical models for complex processes and systems Thus they can be used in decision making systems process forecasting control of nonlinear systems and processing of heterogeneous time series Novel Approaches to Structural Identification Using Geometric Framework Analysis proposes various solutions to the problem of identification theory It discusses the development of adaptive identification and control systems for analyzing complex processes and systems Covering topics such as parametric restrictions distributed lags and interconnected systems this book is an excellent resource for data analysis specialists mathematical software developers professionals researchers scholars academicians and more

Issues in Acoustic Signal — Image Processing and Recognition C. H. Chen, 2012-12-06 The NATO Advanced Research Workshop on Issues in Acoustic Signal Image Processing and Recognition was held August 5 9 1982 at the Cappuccini complex in San Miniato Italy The Workshop was primarily concerned with the underwater acoustic signal processing and seismic signal analysis and a major effort was made to link these topics with pattern recognition image processing and artificial intelligence Major issues and new approaches in these interrelated areas were closely examined in the Workshop In addition to paper presentations three discussion sessions were held on 1 spectral analysis in underwater acoustics 2 seismic wave propagation seismic imaging and migration and seismic inversion and 3 unresolved issues and future directions This Proceedings volume includes most presentations made at the Workshop The publication like the meeting itself is unique in the sense that it provides extensive interactions among the closely related areas stated above Such interactions which usually result in the integration of different systems or approaches are certainly much needed to achieve some performance breakthrough while individual systems or approaches reach their performance

limit I am grateful to all participants for their active participation that makes the Workshop very productive and to Dr Lewis J Lloyd and Dr Ralph Goodman for their help to arrange an informative visit to the SACLANT ASW Research Centre for the Workshop participants I am confident that this publication will be equally productive to report important current research results and near future research activity particularly in underwater acoustic signal processing

Linguistic Evolution through Language Acquisition Ted Briscoe, 2002-08-08 This is a study of how children acquire language and how this affects language change over generations Written by an international team of experts the volume proceeds from the basis that we can not only address the language faculty per se within the framework of evolutionary theory but also the origins and subsequent development of languages themselves languages evolve via cultural rather than biological transmission on a historical rather than genetic timescale The book is distinctive in utilizing computational simulation and modelling to help ensure the theories constructed are complete and precise Drawing on a wide range of examples the book covers the why and how of specific syntactic universals the nature of syntactic change the language learning mechanisms required to acquire an existing linguistic system accurately and to impose further structure on an emerging system and the evolution of language s in relation to this learning mechanism
