Structuring Sense Vol 1 In Name Only:

Structuring Sense: Volume 1: In Name Only Hagit Borer, 2005-01-20 Volume III Taling form This book is volume III of a trilogy which explores the difference between words however defined and structures however constructed The trilogy sets out to demonstrate that the explanation of linguistic competence should be shifted from lexical entries to syntactic structure from the memorizing of listed information to the manipulation of grammatical rules Its reformulation of how grammar and listed items interact has profound implications for linguistic philosophical and psychological theories about the human mind and language The book departs from both constructional approaches to syntax and the long generative tradition that uses the word as the nucleus around which the syntax grows It argues that the hierarchical abstract structures of language are universal not language specific and that language variation emerges from the morphological and phonological properties of grammatical functors or more specifically inflection This volume applies this approach to the construction of complex words The book develops a new model of word formation arguing that the basic building blocks of language are on the one hand rigid semantic and syntactic functions and on the other hand roots which in themselves are but packets of phonological information and are devoid of both meaning and grammatical properties of any kind Within such a model syntactic category syntactic selection and argument structure are all mediated through syntactic structures projected from rigid functions or alternatively constructed through general combinatorial principles of syntax such as Chomsky s Merge The meaning of words in turn does not involve the existence of lexemes but rather the matching of a well defined and phonologically articulated syntactic domain with conceptual Content itself outside the domain of language as such In a departure from most current models of syntax but in line with many philosophical traditions then the Exo Skeletal model partitions meaning into formal functions on the one hand and Content on the other hand While the former are read off syntactico semantic structures as is usually assumed Content is crucially read off syntactico phonological structures

In Name Only. Structuring Sense Hagit Borer, 2005 Structuring Sense explores the difference between words however defined and structures however constructed It sets out to demonstrate over three volumes of which this is the first that the explanation of linguistic competence should be shifted from lexical entry to syntactic structure from memory of words to manipulation of rules Its reformulation of how grammar and lexicon interact has profound implications for linguistic philosophical and psychological theories about human mind and language Hagit Borer departs from both language specific constructional approaches and lexicalist approaches to argue that universal hierarchical structures determine interpretation and that language variation emerges from the morphological and phonological properties of inflectional material In Name Only applies this radical approach to nominal structure Integrating research in syntax semantics and morphology the author argues that nominal structure is based on the syntactic realization of semantic notions such as classifier quantity and reference In the process she seeks to do away with lexical ambiguity and type shifting Among the topics she considers are the interpretation of proper

names the mass count distinction the weak strong interpretation of quantifiers partitive and measure phrases and the structural representation of the definite article In the process she explores inter language variation through the properties of the morpho phonological system The languages discussed include English Chinese Italian and Hebrew
