**Smart Trajectories** Azedine Boulmakoul, Lamia Karim, Bharat Bhushan, 2022-12-30 This book highlights the developments, discoveries, and practical and advanced experiences related to responsive distributed computing and how it can support the deployment of trajectory-based applications in smart systems. *Smart Trajectories: Metamodeling Reactive Architecture for Analytics and Smart Applications* deals with the representation and manipulation of smart trajectories in various applications and scenarios. Presented in three parts, the book first discusses the foundation and principles for spatial information systems, complex event processing, and building a reactive architecture. Next, the book discusses modeling and architecture in relation to smart trajectory metamodeling, mining, and big trajectory data, and clustering trajectories. The final section discusses advanced applications and trends in the field, including congestion trajectory analytics and real-time Big Data analytics in cloud ecosystems. Metamodeling distributed architectures, reactive programming, Big Data analytics, NoSQL databases, connected objects, and edge fog cloud computing form the basis of the concepts and applications discussed. The book also presents a number of case studies to demonstrate smart trajectories related to spatiotemporal events such as traffic congestion and pedestrian accidents. This book is intended for graduate students in computer engineering, spatial databases, complex event processing, distributed systems, and geographical information systems (GIS). The book will also be useful for practicing traffic engineers, city managers, and environmental engineers interested in monitoring and security analysis.

**Smart Computing** Mohammad Ayoub Khan, Sanjay Gairola, Bhola Jha, Pushkar Praveen, 2021-06-22 The field of SMART technologies is an interdependent discipline. It involves the latest burning issues ranging from machine learning, cloud computing, optimizations, modelling techniques, Internet of Things, data analytics, and Smart Grids, among others, that are all new fields. It is an applied and multi-disciplinary subject with a focus on Specific, Measurable, Achievable, Realistic, Timely system operations combined with Machine intelligence, Real Time computing. It is not possible for any one person to comprehensively cover all aspects relevant to SMART Computing in a limited extent work. Therefore, these conference proceedings address various issues through the deliberations by distinguished Professors and researchers. The SMARTCOM 2020 proceedings contain tracks dedicated to different areas of smart technologies such as Smart System and Future Internet, Machine Intelligence, and Data Science, Real Time, and VLSI Systems, Communication, and Automation Systems. The proceedings can be used as an advanced reference for research and for courses in smart technologies taught at graduate level.
