The Distant Suns

Edwin James Houston

The Distant Suns:

The Distant Suns Michael Moorcock, Philip James, 2013-04-11 It is the 21st century and Earth is overcrowded underfed and teetering on the brink of worldwide chaos Their best and last hope rests among the stars in finding another world able to sustain human life Enter Colonel Jerry Cornelius hero and adventurer extraordinaire Along with his wife Cathy and good friend Professor Frank Marek he will brave the madness of space and the dangers of an alien world But there is more to this new world than meets the eye Secrets are buried here in its earth and in its history Uncovering them could hold the keys to planet Earth s salvation as well as its past But time is against Jerry Cornelius His friend has gone mad his wife has gone missing and with each tick of the clock planet Earth draws closer to its end Bereft of friends loved ones and all he has ever known Jerry Cornelius will hold the fates of two worlds in his hands A solution will require all his legendary strength intelligence and courage and even that might not be enough in the end *The Light of Distant Suns: Book Three of the First Souls Trilogy* Peter Canova, 2019-01-12 A land where souls first descended to earth an incomparable civilization descended into wars of dominion that will destroy the home of the gods but allow humanity to be born **Distant suns** R. Michael Smithwick, 1993 **Distant Suns - The Journey Home** Patricia Smith, 2013-09-14 Distant Suns The Journey Home is the sequel to Distant Suns The crew of the star ship Terra the last hope to avoid extinction for the human race are nearly two years from the dying planet Earth when their four thousand year long journey to reach the first possible habitable world is unexpectedly halted **Distant Suns - The Silexous** Patricia Smith, 2015-10-09 As the survivors of the catastrophe that turned Earth into a barren rock are settling on their new planet an enemy from a past encounter finds them and a new fight for survival begins There s a ship coming around from the dark side of the planet I ve tried communicating with it but have so far received no response Lauren informed Is it the Cyroux Joel asked It doesn t look like the original craft we saw Then as the vessel cleared the planet and moved away from the murky effect of the atmosphere Lauren leapt from her seat and lunged for the captain s chair It s the ship that attacked us she yelled Get out of there Joel called go anywhere just get away Lauren pulled on the headset used to control Terra s systems and was just about to instruct the ship to go to warp when the screen was swamped by a powerful pulse of energy As the alien vessel grew larger Lauren realized Terra was moving towards it when a set of numbers indicating their location in space changed rapidly on the holographic display which appeared ahead the moment her brain waves connected with the ship s systems She instructed Terra to go to warp Space ahead blurred slightly but before the craft could make the leap a pulse of energy was fired from the attacking vessel again and the warp drive was disabled They ve got us in a tractor beam we re being dragged towards them she told the captain on the surface She now instructed the ship to reverse For a moment the numbers on the holographic display held static and Lauren had some hope they might escape the grip of the beam until another pulse pounded Terra resonating throughout the hull and the figures returned to their previous state continuing to climb What about the force field Anton suggested dragging his eyes

away from the enemy ship Could we repel them with the force field It s on It activated the moment the system sensed I was alarmed A hiss soft at first but increasing with proximity began to grow on the flight deck It decreased slightly when the front of the alien vessel opened out to reveal a massive cargo hold Then as Terra continued to be dragged in the hiss climbed again until it reached a painful level What s happening Joel called We re being pulled into the ship They re taking Terra inside their vessel The force field is overloading Anton informed The energy levels are into the red Deactivate it Joel instructed Do everything you can to escape We ll Then the link was severed as space behind Terra disappeared *Across the Sea of Suns* Gregory Benford,2007-07-31 The second volume in the classic hard sci fi series by the renowned physicist and Nebula Award winning author So good it hurts Washington Post Book World 2076 Technology has propelled the world into a new age of enlightenment Nigel has left Earth to explore space and search for alien life But while on this captivating mission humanity s birthplace has fallen prey to attack and its seas are seeded with alien lifeforms Now Nigel is left to search for the only savior he knows the one who saved him once before the alien machine called the Snark Having left the solar system and turned traitor to its alien masters Nigel is unsure of the Snark s new allegiance Is the Snark a friend Or will it also turn on Nigel proving to be a deadly foe [Earths of Distant Suns](#) Michael Carroll,2016-10-03 Based on the latest missions results and supported by commissioned artwork this book explores the possible lessons we may learn from exoplanets As the number of known Earth like objects grows significantly the author explores what is known about the growing roster of pale blue dots far afield Aided by an increased sensitivity of the existing observatories recent discoveries by Keck the Hubble Space Telescope and Kepler are examined These findings once thought to be closer to the realm of science fiction have fired the imaginations of the general public as well as scientists All of us are mesmerized by the possibility of other Earth like worlds out there Author Michael Carroll asks the tough questions of what the expected gain is from identifying these Earth analogs spread across the Universe and the reasons for studying them Potentially they could teach us about our own climate and Solar System Also explored are the more remote options of communication between or even travel to these distant yet perhaps not so dissimilar worlds **The New Landscape of Mobile Learning** Charles Miller,Aaron Doering,2014-02-24 The New Landscape of Mobile Learning is the first book to provide a research based overview of the largely untapped array of potential tools that m Learning offers educators and students in face to face hybrid and distance education This cutting edge guide provides An essential explanation of the emergence and role of Apps in education Design guidelines for educational Apps Case studies and student narratives from across the US describing successful App integration into both K 12 and Higher Education Robust research based evaluation criteria for educational Apps Although many believe that Apps have the potential to create opportunities for transformative mobile education a disparity currently exists between the individuals responsible for creating Apps i e developers who often have little to no instructional experience and the ultimate consumers in the classroom i e K 20 educators and students The New Landscape of Mobile Learning bridges this gap by illuminating

critical design integration and evaluation narratives from leaders in the instructional design distance education and mobile learning fields

Distant Suns Patricia Smith, 2013-08-30 A massive cloud of hydrogen is travelling through space on a collision course with Earth At a high ranking meeting two astronomers Edward and Joseph are sworn to secrecy when they reveal that in six months time as the gas envelops the planet it will turn the atmosphere into a fireball Their beautiful young prodigy the resourceful Lauren is initially kept in the dark but soon discovers the destination of the cloud when she calculates its route Two months before its encounter with Earth the gas is captured and absorbed by the planet Jupiter They think they have avoided disaster but you can be looking the wrong way when the end of the world sneaks up on you A beautifully descriptive action packed story about love self sacrifice and the desperate battle to avoid extinction on a dying world Praise for *Distant Suns* The subject matter of your book couldn't be more topical or timely and I found the central premise of your story to be fascinating All the material in your book to do with the gas clouds asteroids superheating etc is absolutely brilliant You manage to put across very simply some ideas that I am sure are actually quite complicated The inclusion later on in the narrative of those short scenes from various corners of the world helps to establish the global impact of the story It also opens the narrative out lending it a pleasing cinematic feel and creating a sense of urgency and community TLC Both Cindy our publisher and I agree that the novel is wonderful and that it should make an exciting movie Ed Lord Review I enjoyed reading both the dialogue rich scenes of the characters struggling with a now imminent uncertainty interspersed with the science scenes of astral happenings and the unfolding effects of a planet being slowly stripped of the atmosphere that gave it life The science is wholly credible and the characters express beautifully the sadness joy and hope which lies in the gaps in between those extremes of emotion just as the hope that lies in the distances between the stars Neal Terry Also by Patricia Smith *Time Split* and *Distant Suns* **The Journey Home** **The Story Of The Sun, Moon, And Stars** Agnes Giberne, 2025-11-14 This edition has been fully restored with modern typesetting custom cover design *The Story of the Sun Moon and Stars* by Agnes Giberne is an engaging introduction to astronomy crafted to make the vast cosmos accessible to beginners without the need for complex mathematics With a preface by Charles Pritchard the book offers a simplified yet thorough exploration of celestial bodies inviting readers to appreciate the scientific beauty of the universe Giberne's narrative weaves together scientific facts with imaginative storytelling enabling a deeper connection to the wonders of the cosmos The book begins by challenging archaic beliefs that placed Earth at the center of the universe presenting it instead as a small part of a vast celestial family Through vivid descriptions and relatable analogies Giberne takes readers on a journey through the Solar System explaining the structure and dynamics that govern celestial motions She highlights how stars including our sun are luminous suns themselves while planets shine by reflecting sunlight fostering a sense of wonder about the intricate workings of the cosmos Giberne delves into the formation of Earth and other celestial bodies illustrating how gaseous nebulae condense and rotate to form planets She explains the laws of attraction and motion

using Saturn's rings as an example and explores humanity's historical fascination with the sun detailing its immense size and distance from Earth. The book also covers early observations of sunspots and the sun's rotation reflecting humanity's enduring quest to understand the universe. The focus shifts to Jupiter examining its atmospheric conditions, striking cloud bands, and powerful winds. Giberne speculates on Jupiter's internal nature and contemplates the potential for life on its moons. She describes the moons' characteristics, their orbital periods, and the unique astronomical phenomena they create, inviting readers to reconsider their understanding of celestial bodies and their roles in the cosmos. The narrative blends scientific observation with a sense of wonder, highlighting the complex interactions between Jupiter and its satellites.

Uncovering Student Ideas in Astronomy Page Keeley, Cary Ivan Sneider, 2012. What do your students know or think they know about what causes night and day? Why are days shorter in winter and how to tell a planet from a star? Find out with this book on astronomy, the latest in NSTA's popular Uncovering Student Ideas in Science series. The 45 astronomy probes provide situations that will pique your students' interest while helping you understand how your students think about key ideas related to the universe and how it operates. The book is organized into five sections: the Nature of Planet Earth, the Sun-Earth System, Modeling the Moon, Dynamic Solar System, and Stars, Galaxies, and the Universe. As the authors note, it's not always easy to help students untangle mistaken ideas. Using this powerful set of tools to identify students' preconceptions is an excellent first step to helping your students achieve scientific understanding.

The Great Harmonia Andrew J. Davis, 1996-09. 1858. Being a philosophical revelation of the natural, spiritual, and celestial universe. Contents: My Early Experience, My Preacher, True Reformer, Philosophy of Charity, Individual Mission of Woman, True Marriage.

The Elements of Physical Geography Edwin James Houston, 1890. **Popular Astronomy** William Wallace Payne, Charlotte R. Willard, Herbert Couper Wilson, Ralph Elmer Wilson, Curvin Henry Gingrich, 1906. **Hearst's Magazine**, 1912. The Mechanics of Daily Life Vincent Perronet Sells, 1893. *The Moon* Richard Anthony Proctor, 1878. The half-tone plate is interesting historically because this same plate was in the 1873 issue of the book. The two collotype plates are beautiful examples and look much like other plates executed by the Autotype Co, though no printer is identified. Hanson Collection catalog p. 59. **The Silent Readers** William Dodge Lewis, Albert Lindsay Rowland, 1920. The American Geologist Newton Horace Winchell, 1889. Includes section "Review of recent geological literature." Future Seeing and Philosophy of Philosophies ... Edmund Shaftesbury, 1926.
